Abstract

MEME coins have evolved from a fringe internet cultural phenomenon into a massive crypto asset class with a total market capitalization of tens of billions of dollars and tens of millions of users worldwide. Driven by pure cultural consensus and community power, it has demonstrated astonishing explosive growth and dissemination potential. However, beneath this frenzied prosperity, the entire MEME ecosystem faces four structural pain points that urgently need to be addressed: a lack of real-world application scenarios, a lack of effective community governance tools, a lack of unified community identity, and a lack of trust due to information asymmetry. These issues collectively result in the short lifespans of most MEME coins, with speculative attributes far exceeding their intrinsic value, severely limiting their long-term development potential.

To address these challenges, YOGEN was created.

To achieve this vision, the YOGEN platform has built five core pillars:

Launch Layer: MEME Launch Platform. Unlike traditional no-barrier launch platforms, YOGEN's launch platform employs an approval system to ensure a high success rate for MEME launches. Only communities or organizations that pass the approval process are qualified to launch MEME on YOGEN. Furthermore, MEME launched on the YOGEN platform automatically gains full usage rights on the platform.

Value Layer: Prediction Market. By providing a decentralized prediction platform, we create high-frequency, real-world consumption and use cases for MEME coins, transforming them from purely speculative assets.

Governance Layer: Decentralized Governance Suite (DAO Suite). We provide standardized on-chain governance tools, enabling any MEME community to easily achieve transparent and efficient community self-governance, transforming community consensus into development momentum.

Identity Layer: NFT Blind Box & Marketplace

YOGEN has built a complete NFT issuance, blind box, and trading system for the MEME community, serving as a carrier of community identity, cultural narrative, and long-term

value accumulation. Through the NFT blind box mechanism, the community can issue identity-related NFTs in a more participatory and random way, stimulating users' desire to explore and collect, and enhancing early participation.

In the secondary NFT trading market, these identity NFTs are not only visual symbols but also a comprehensive carrier of community membership, governance rights, activity benefits, and emotional value.

NFTs play a crucial role in the YOGEN ecosystem, connecting MEME, governance, and community culture, evolving identity from a static label into a tradable, priced, and co-creatable digital asset.

Trust Layer: MEME HUB Information Aggregation Zone. We are committed to creating a "CoinMarketCap" for the MEME field, aggregating and verifying project information, establishing trust standards, and helping users filter noise and discover value.

YOGEN is not just a tool platform, but a brand-new ecological vision. We believe that by infusing MEME coin with real utility and decentralized governance, we will unlock the boundless potential of this trillion-dollar market. We invite you to join us in witnessing and participating in this great transformation from "meme" to "value."

Preference

YOGEN's Vision: From Meme to Value

In the heart of the digital world, a brand-new, community-driven asset class is rising at an unprecedented pace—MEME coin. Born from the collective humor of the internet and nurtured by the viral spread of social media, its essence is not code or complex algorithms, but pure human cultural consensus. A joke, an image, a symbol can a global, passionate community within days. This force, raw and chaotic, contains limitless potential.

However, potential does not equal value. If first-generation cryptocurrencies (like Bitcoin) established value through "machine consensus" via algorithms, and second-generation cryptocurrencies (like Ethereum) established value through "code consensus" via smart contracts, then we believe that the next stage of evolution will inevitably belong to "cultural consensus" represented by MEME coin. But this value needs to be guided, constructed, and empowered.

YOGEN's vision is to become the catalyst and infrastructure for this great evolution. We firmly believe that by providing these vibrant communities with the tools they need most—real-world applications, fair governance mechanisms, unified identity symbols, and transparent information channels—we can help them bridge the gap between "pure memes" and "functional entities."

"From Meme to Value" is not just our slogan, but the sole principle and ultimate goal of building the YOGEN platform. Why did we build YOGEN? Why did

we choose to enter the MEME field? Because we see the immense opportunities and profound challenges it presents.

The opportunity lies in: MEME coins, with their "anti-VC" and "anti-elitist" stance, showcase the most fundamentalist charm of the crypto world—fairness, openness, and community ownership. They possess the user cohesion and emotional resonance that traditional crypto projects dream of, enabling them to achieve a cold start and build a massive community network in a very short time. This is one of the most valuable resources in the crypto world.

The challenge lies in: This rapid, unregulated growth model also inherently brings many flaws. Speculative bubbles, project team collapses, community infighting, and a lack of transparency have plagued MEME coins, causing 99% of them to quickly plummet to zero after a brief period of hype. The immense community energy was wasted in this chaotic speculation, failing to translate into any sustainable value.

YOGEN was created precisely to address this core contradiction. We are not denying MEME's cultural and entertainment attributes; on the contrary, we hope to fully preserve its core charm—its fun and community-driven nature—while addressing its shortcomings in value capture, community governance, and long-term development by integrating a mature and reliable infrastructure. We do not create MEME; we serve and empower MEME.

Market Analysis

The MEME ecosystem: a mix of opportunities and challenges

An undeniable force: The market size and consensus value of MEME

A Market Size in the Hundreds of Billions

According to CoinGecko data as of Q2 2025, the total market capitalization of MEME coins as an independent category has exceeded \$100 billion, at its peak accounting for over 3% of the total cryptocurrency market capitalization. This indicates that MEME coins are not a fringe asset, but a large and undeniable component of the crypto economy.

The "Blue Chip" Status Projects

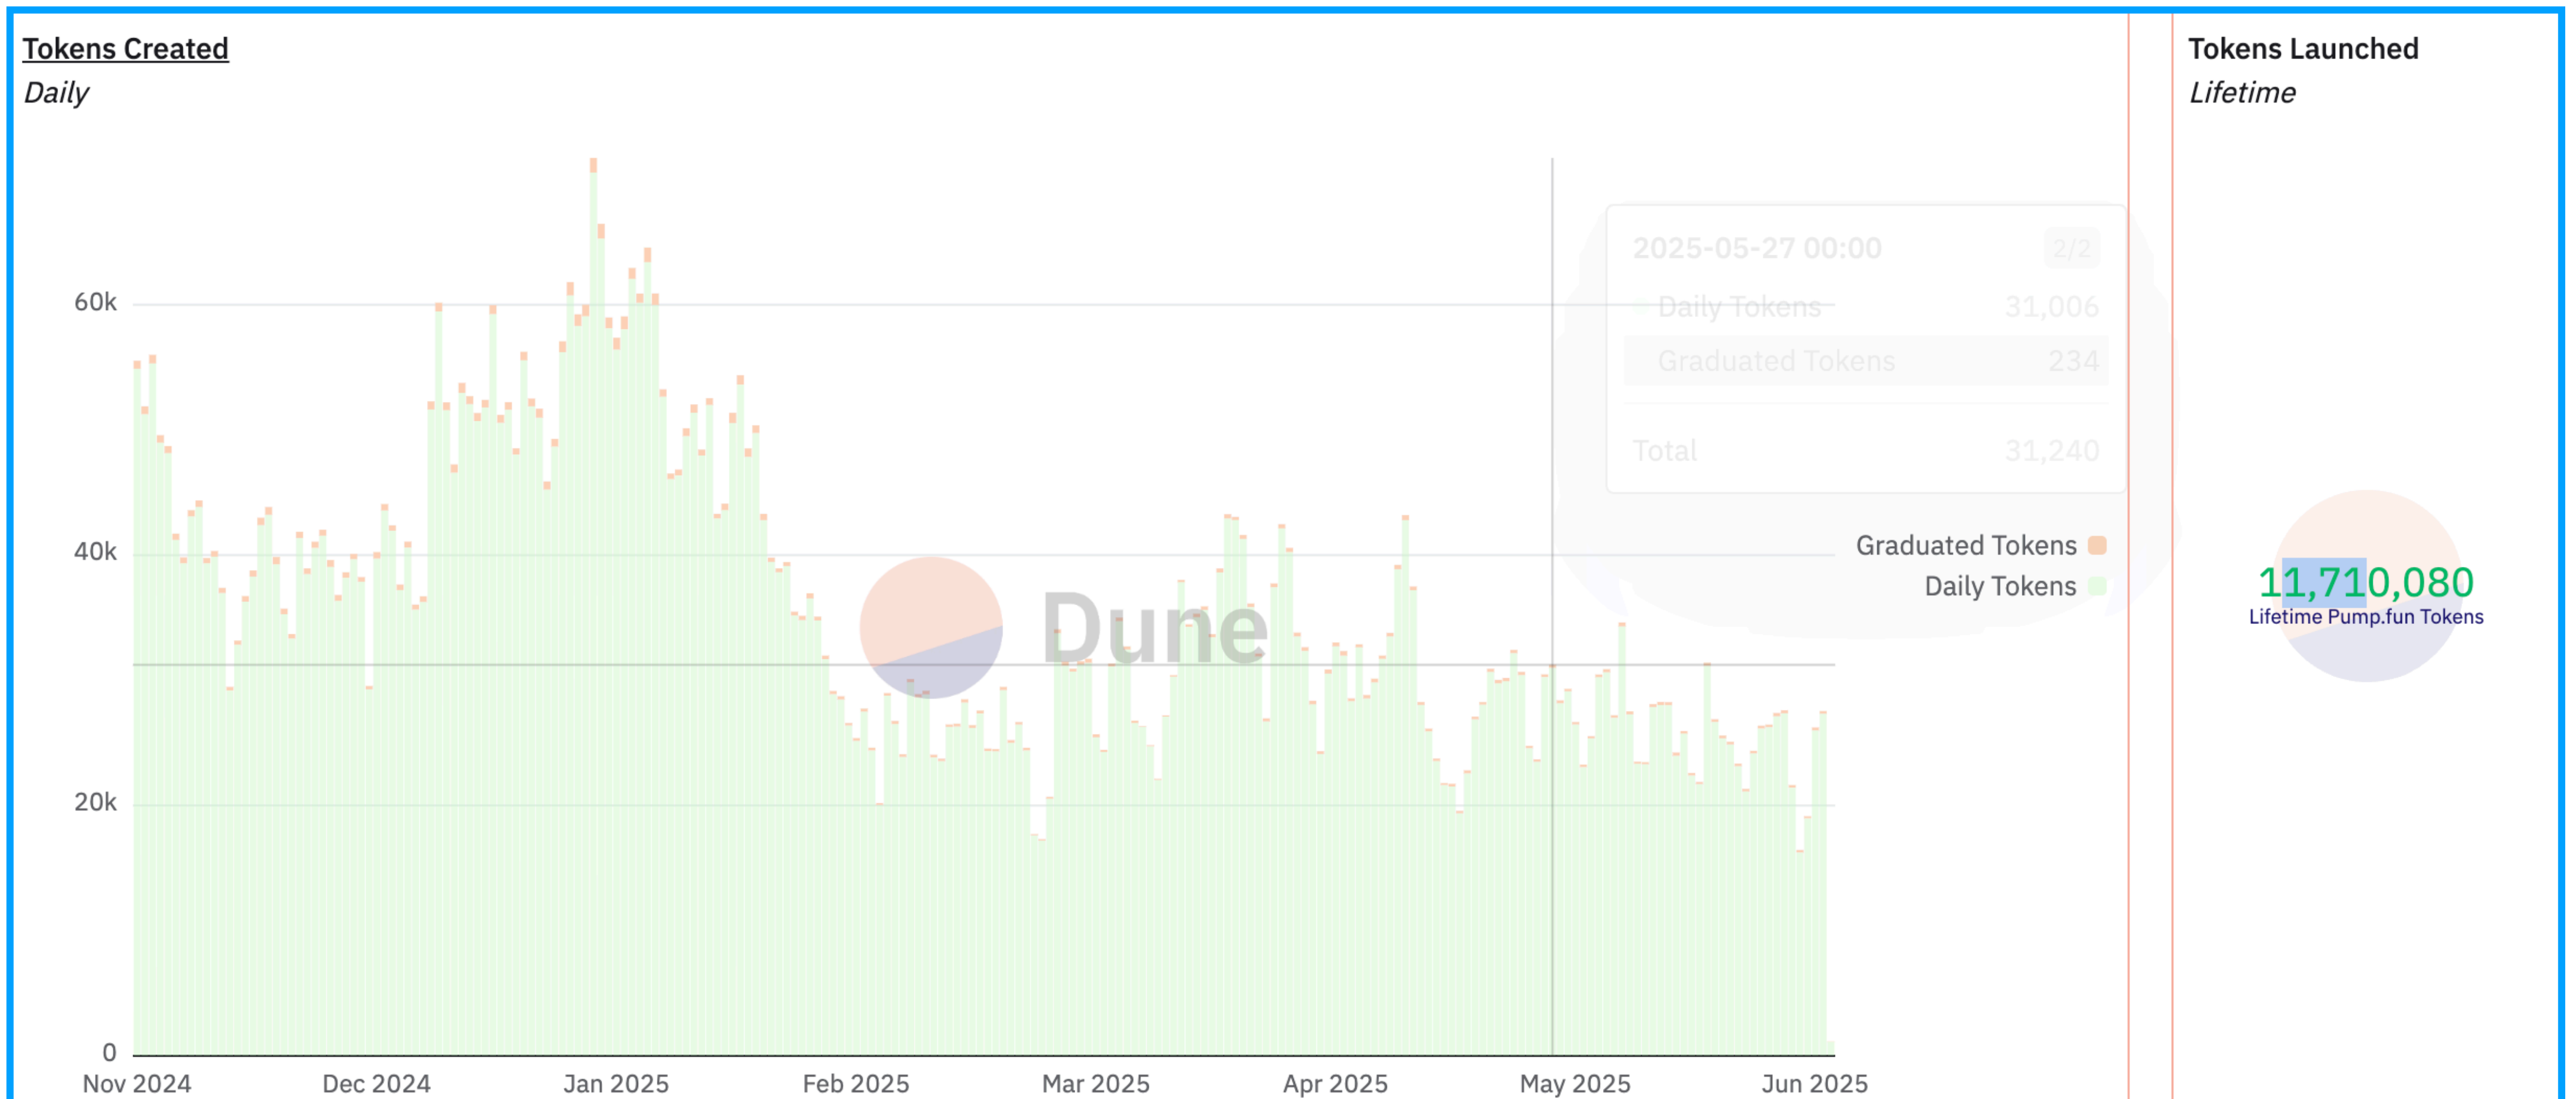

A few leading MEME projects have evolved into "cultural blue chips" with strong brand influence and community loyalty. Doge and SHIB have maintained stable market capitalizations of over \$10 billion for a long time; while emerging projects such as PEPE, Dogwifhat WIF, etc., have also reached market capitalizations of several billion dollars during the 2024-2025 market cycle.

Mainstream Asset Recognition

Among the top 100 cryptocurrencies by market capitalization globally, MEME coins consistently occupy 9 positions. This signifies that the mainstream market and investors have recognized leading MEME coins as investment targets of equal importance to other mainstream public chains and DeFi projects.

pump.fun emit token data (25.07.02)

The Other Side of Prosperity: Over-issuance, Short-lived, and a Value Vacuum

Astounding Over-issuance Rate

Data shows that as of July 2025, on the Solana chain alone, the number of new MEME tokens issued daily through platforms like Pump.fun exceeded 20,000. The total token supply exceeded 10 million. This "over-issuance" phenomenon led to extreme distraction of user attention, and the vast majority of MEME projects were doomed to failure from the outset.

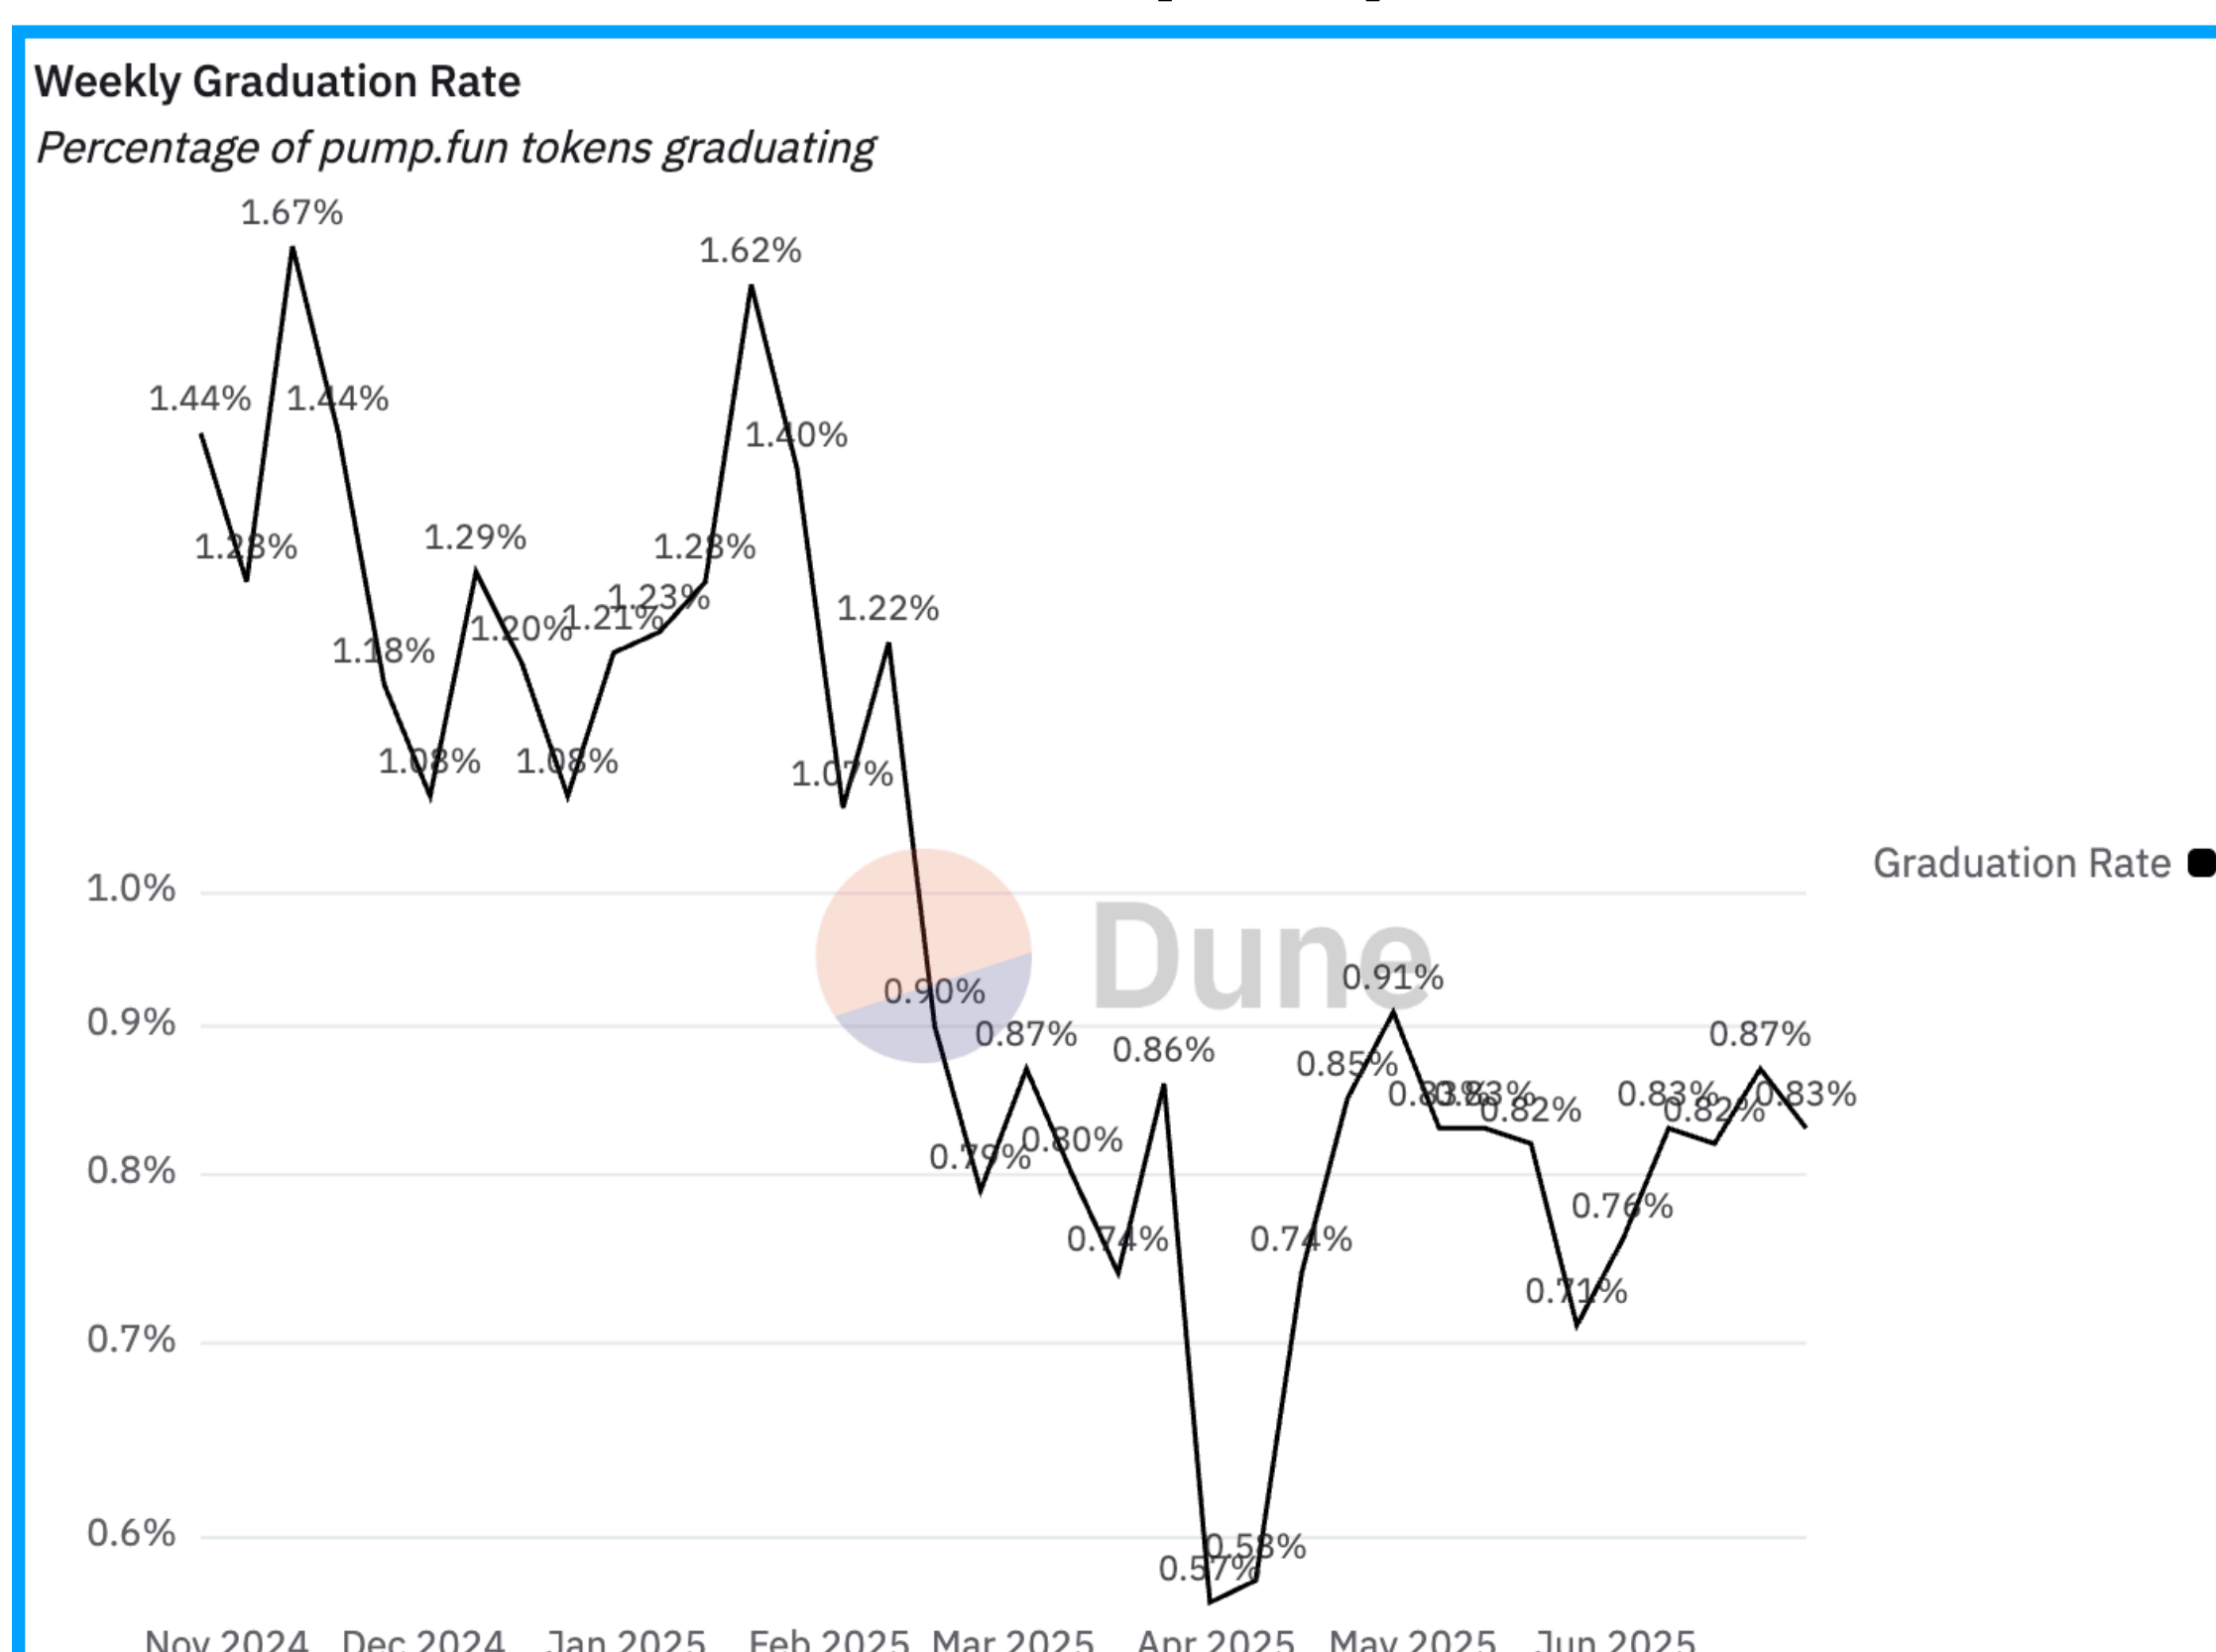

Extremely Low "Graduation Rate"

Although Pump.fun issues over 20,000 tokens daily, the graduation rate is only 1%. This means that the vast majority of these new tokens only undergo an issuance process without any real user participation, essentially resulting in "zero value upon launch." Data shows that over 97% of tokens experienced liquidity depletion, community dissolution, and a substantial drop in price within a week of issuance.

Mini Case Study

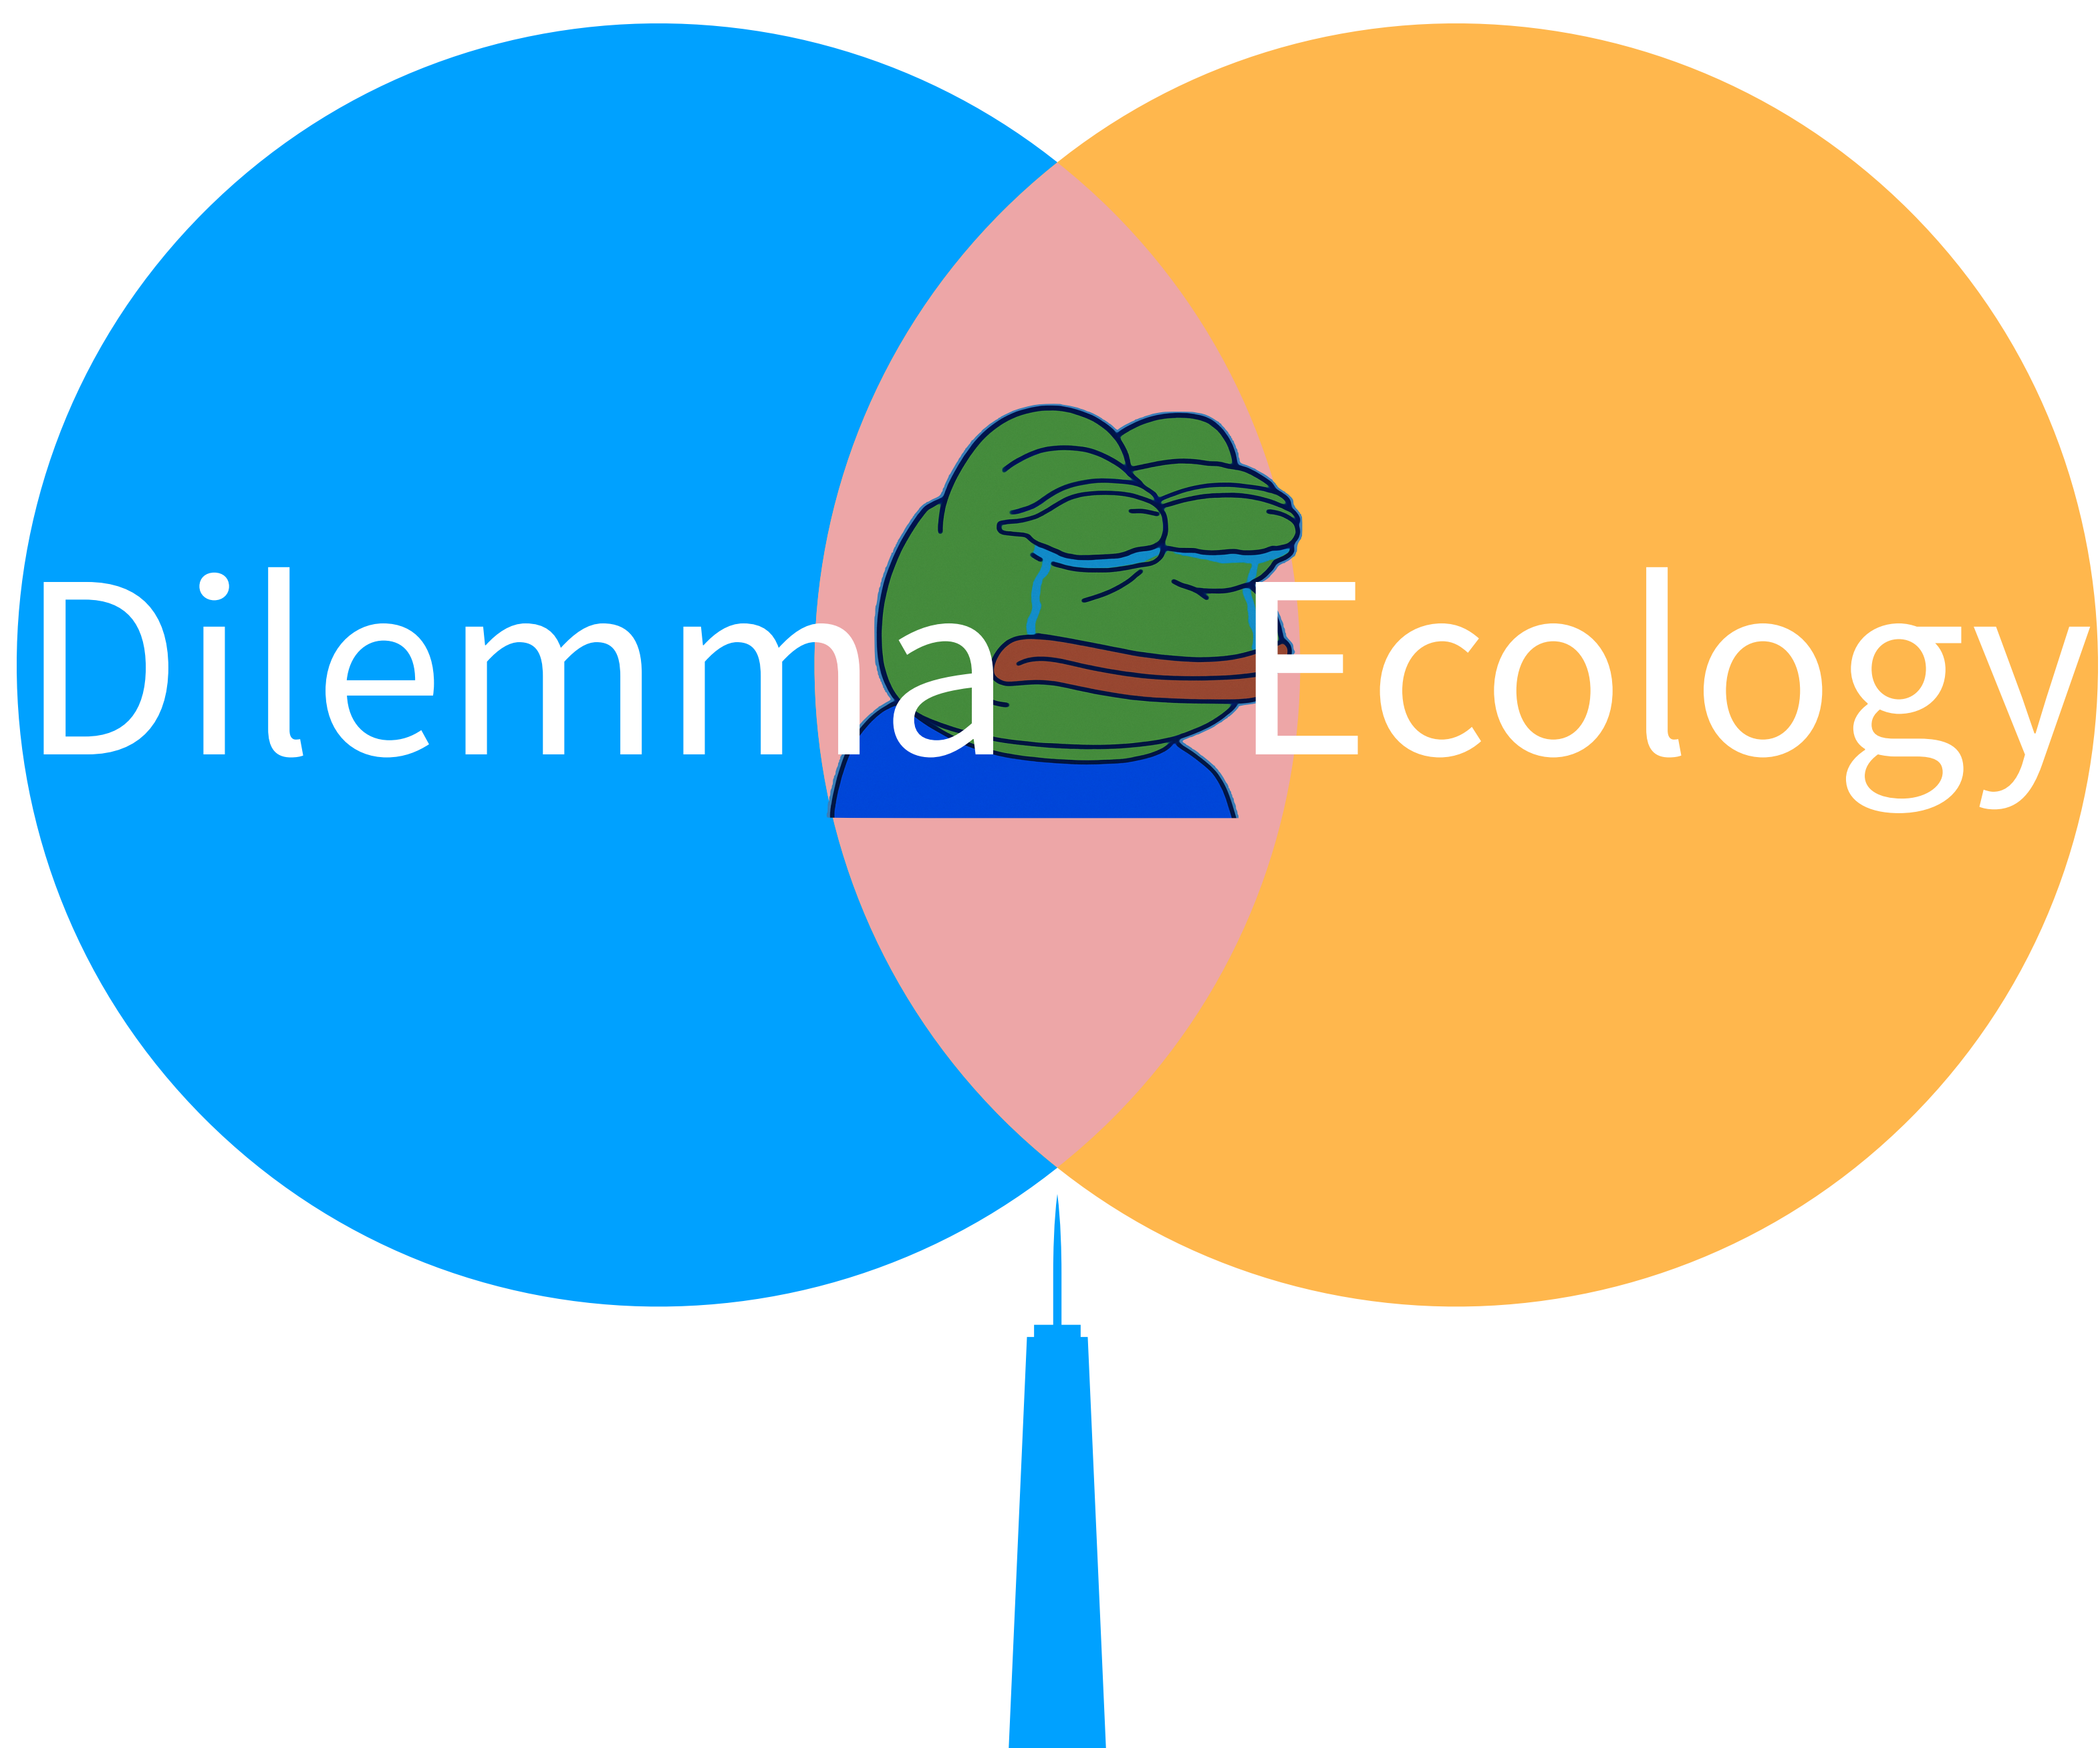

Take the Trump token as an example. It was announced on January 18, 2025, by US President Trump on his Twitter account, and Trump was heavily promoted by users and KOLs on that day. Trump was quickly listed on Binance and OKX the following day, reaching a high of \$83. However, after the initial hype subsided, the price plummeted and has since fallen to \$8.6, representing a loss of nearly 90% from its peak.

Graduate rate of pumpfun token

TRUMP price K Line

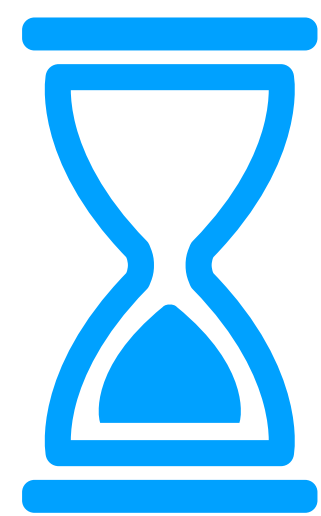

Finding order amidst chaos: the structural dilemma of the MEME ecosystem

The MEME (Medium-Term Memory) sector exhibits a unique and contradictory duality: on one hand, a cultural icon with a market capitalization of billions; on the other, tens of thousands of newly created digital assets that quickly disappear.

This stark contrast is not accidental, but stems from four structural dilemmas rooted within the MEME ecosystem:

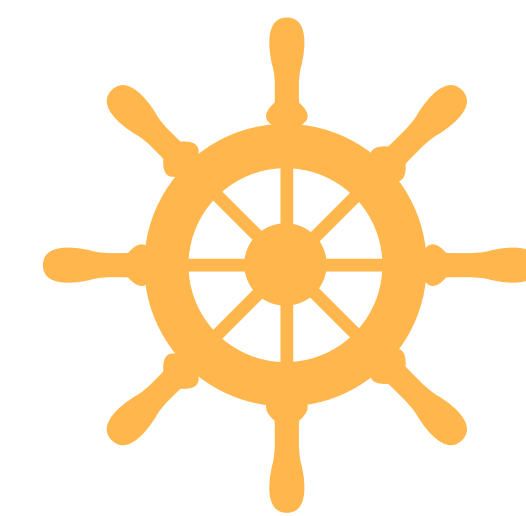

Value Vacuum

Lack of real-world application scenarios to support its value

ambiguous identity

Lack of a unified community identity to form a cohesive force

Governing Chaos

Lack of effective community governance tools to build

consensus

Lack of trust

Lack of transparent information channels to build trust

Solution

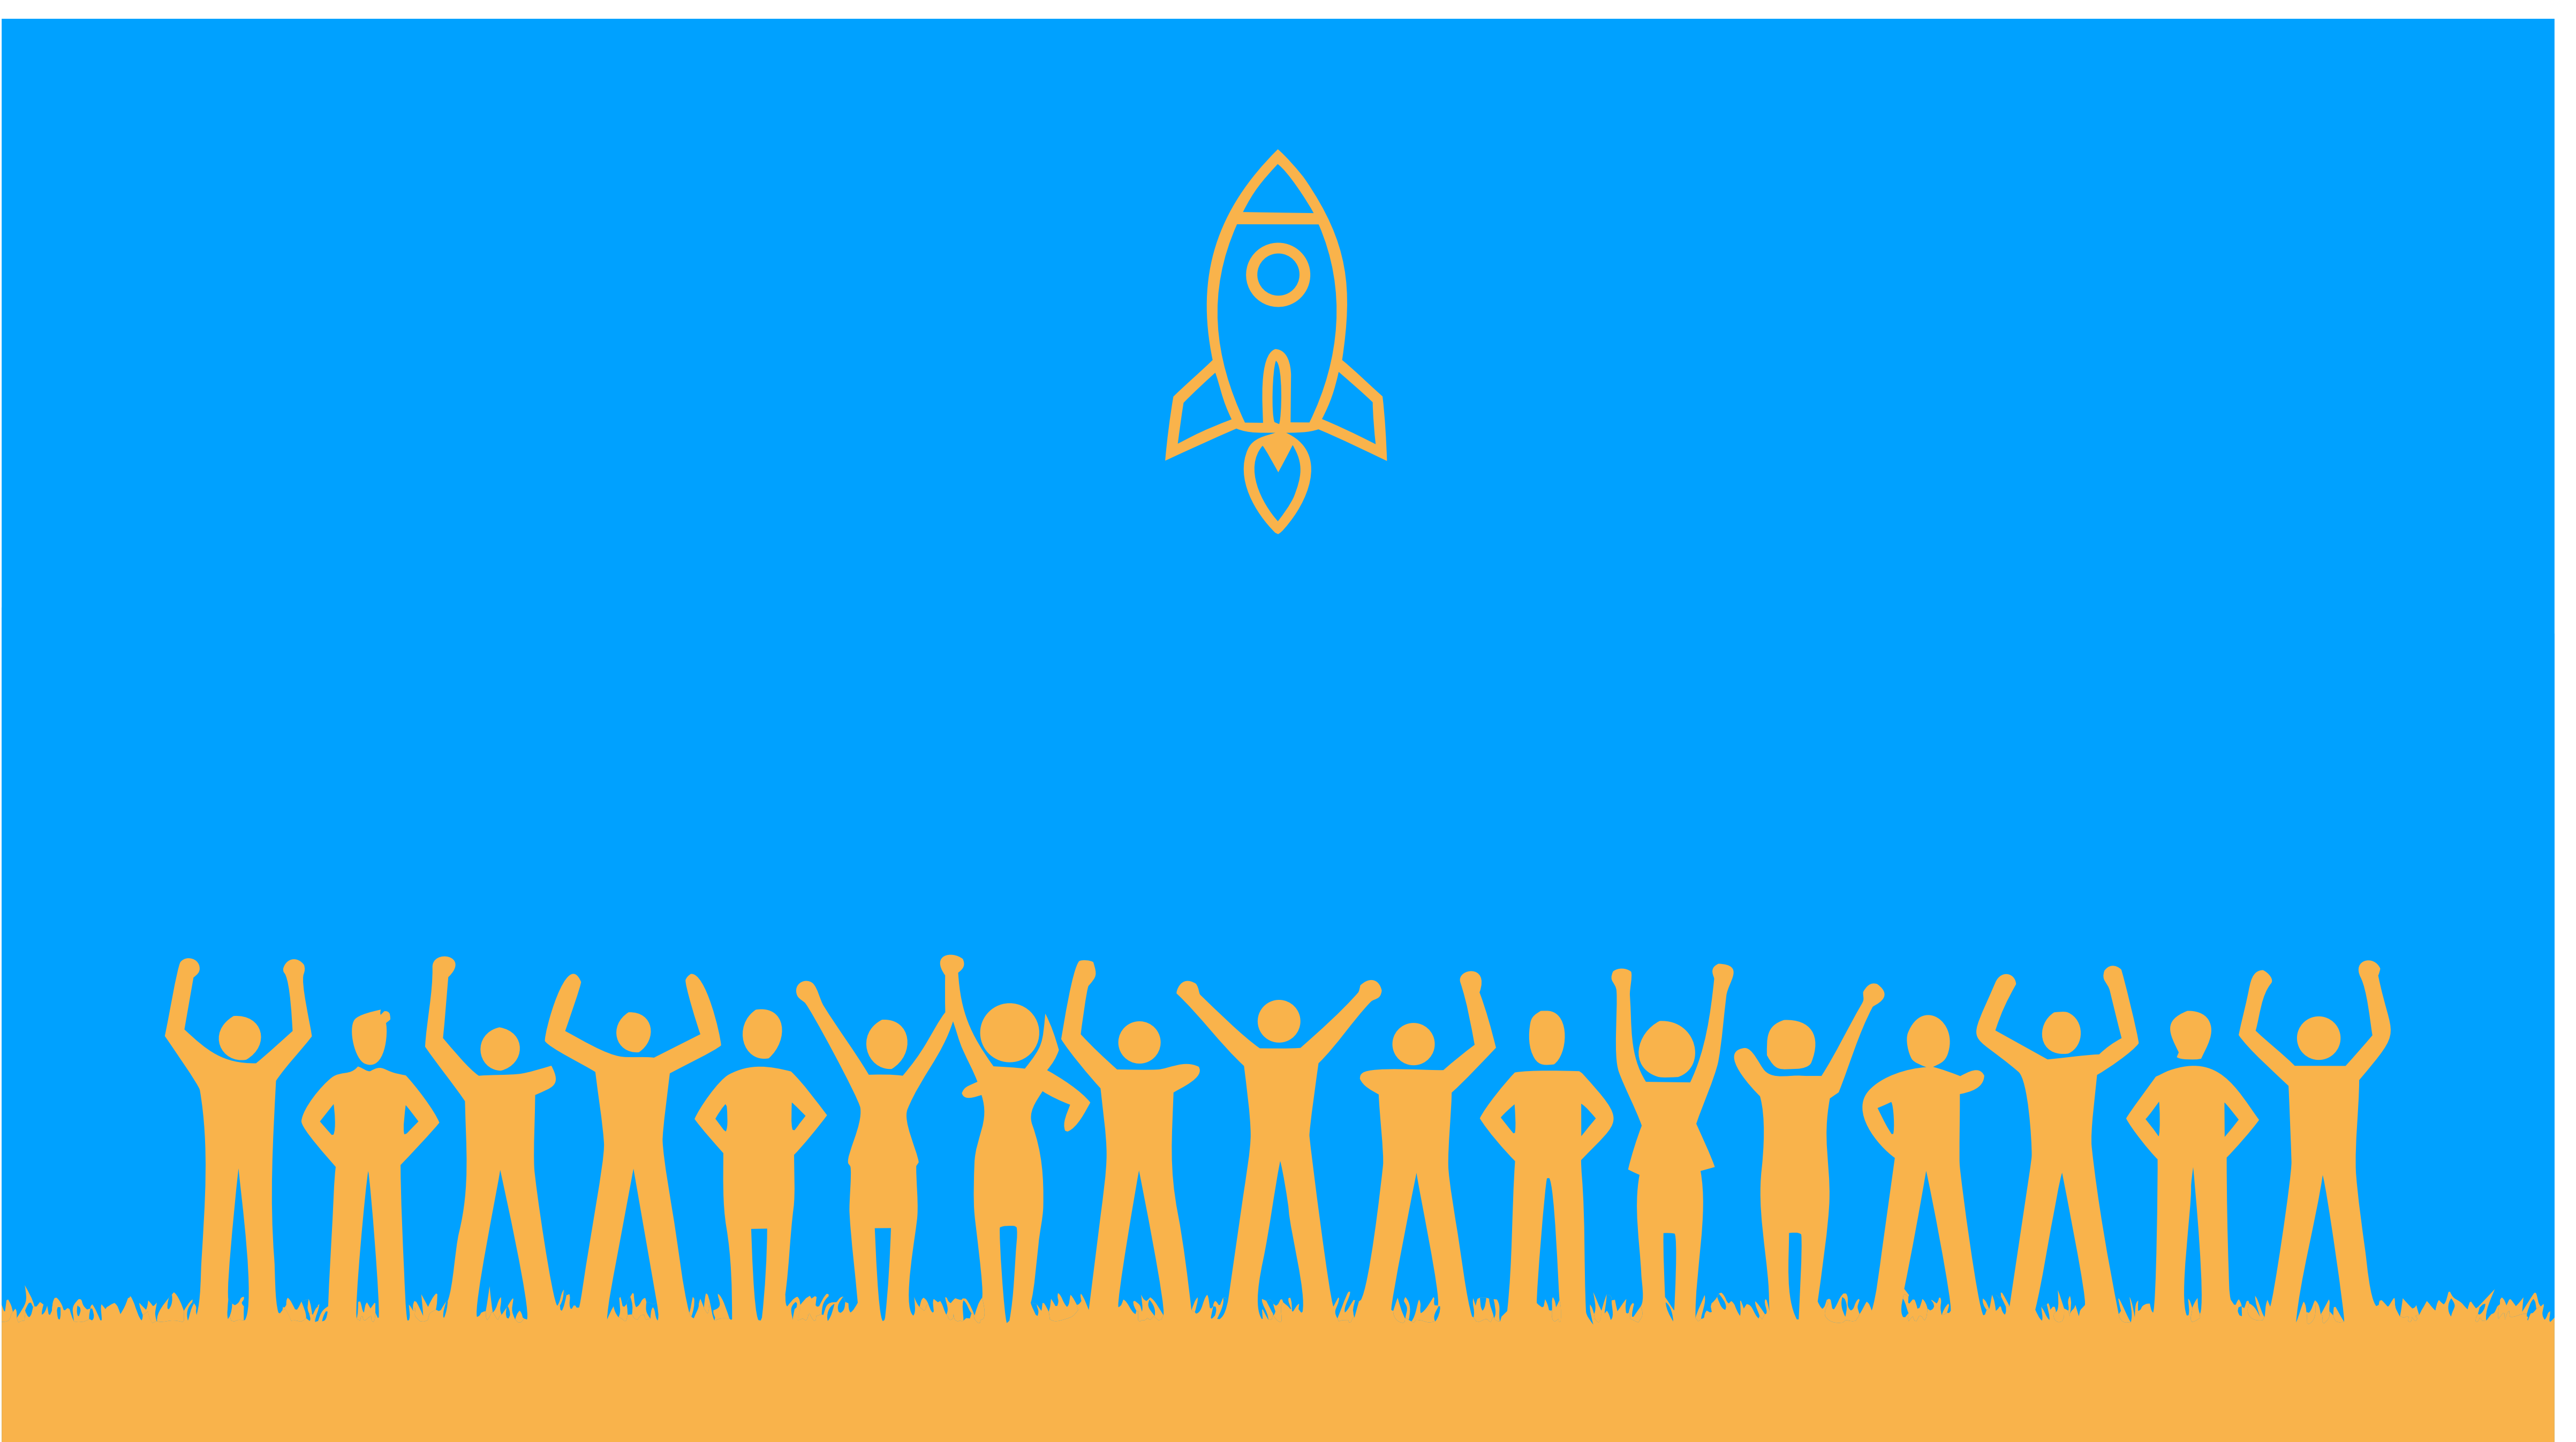

Launch Layer: Meme Launch Layer Community-Driven Launch: Any community member passionate about MEME can submit MEME project proposals, defining the project name, concept, preliminary economic model, etc. After submission, proposals will be publicly reviewed and feedback solicited within the platform.

Governance Voting Review: Community token holders participate in voting based on their holding weight, deciding whether to approve or reject project proposals. The approval threshold can be set by the platform (e.g., 20% of total votes in favor).

Launchpad Launch: Approved MEME projects automatically enter Launchpad, opening multiple rounds of subscription (e.g., seed round, private sale, public sale) and supporting various payment methods (BNB, YOGEN, or other stablecoins).

Minting and Distribution: After the subscription period ends, the platform will automatically distribute MEME tokens according to the subscription ratio. Remaining tokens will be allocated to the community ecosystem fund or team according to the project's pre-set allocation.

Liquidity Access: After the project launch, the platform helps the project inject a portion of the subscription funds and an equivalent amount of MEME tokens into the DEX with one click, forming the project's main trading pair, and locking or releasing them according to a predetermined ratio.

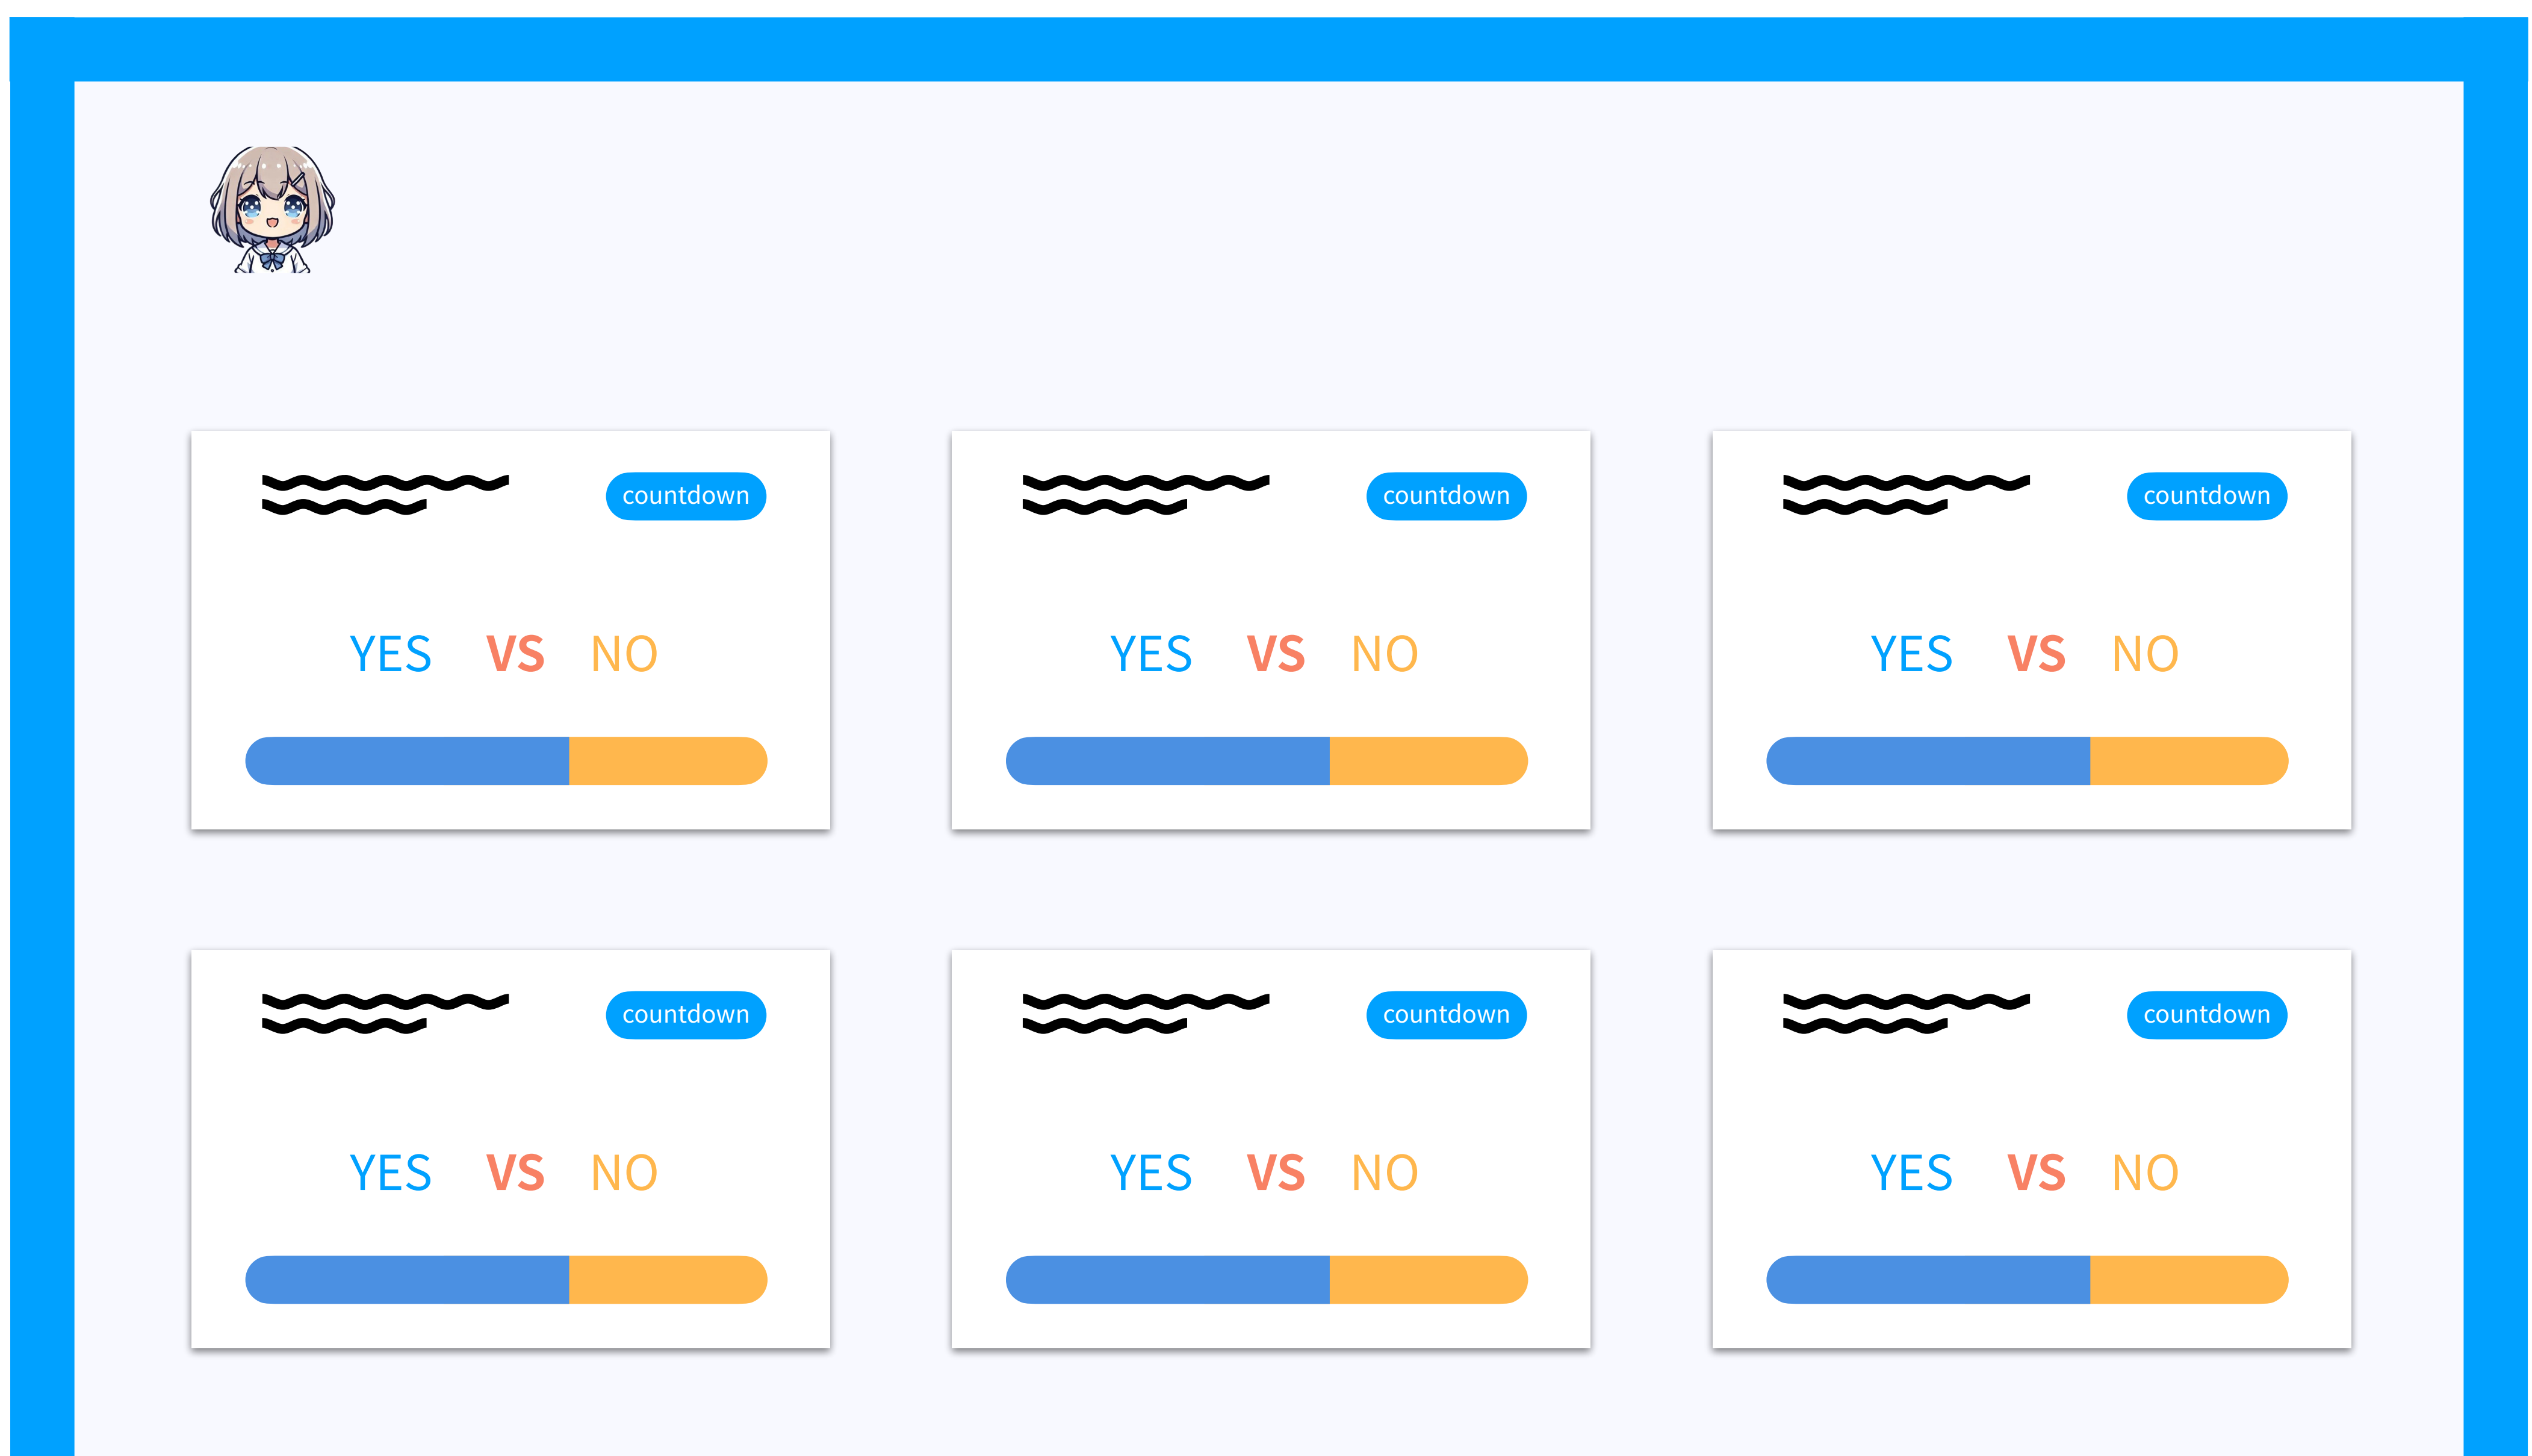

Value Layer: Prediction Market Pain Point Response: Solving the "Value Vacuum" Problem.

The sole purpose of most MEME coins is trading. By introducing a fun and engaging prediction market, we create the first sustainable intrinsic utility for MEME coins that transcends trading.

Mechanism Design: How to Create and Participate in Predictions. YOGEN's prediction market allows any collaborating MEME community to create prediction pools around various public events. Users can use the community's MEME tokens as chips to predict the future outcome of events (e.g., "Will Team A win tonight's game?"). When the event results are revealed, users who predicted correctly will share all tokens in the prediction pool proportionally. The entire process is automatically executed by smart contracts, ensuring fairness, transparency, and trustlessness. The platform can continue to initiate governance votes on important proposals such as subsequent ecosystem incentives, secondary launches, and token buybacks, with data statistics and execution support provided by the platform.

Governance Layer: Addressing Pain Points of Decentralized Governance Suite: Solving the problem of "governance chaos".

We provide a set of plug-and-play standardized DAO tools, enabling any MEME community to easily and cost-effectively achieve true on-chain governance.

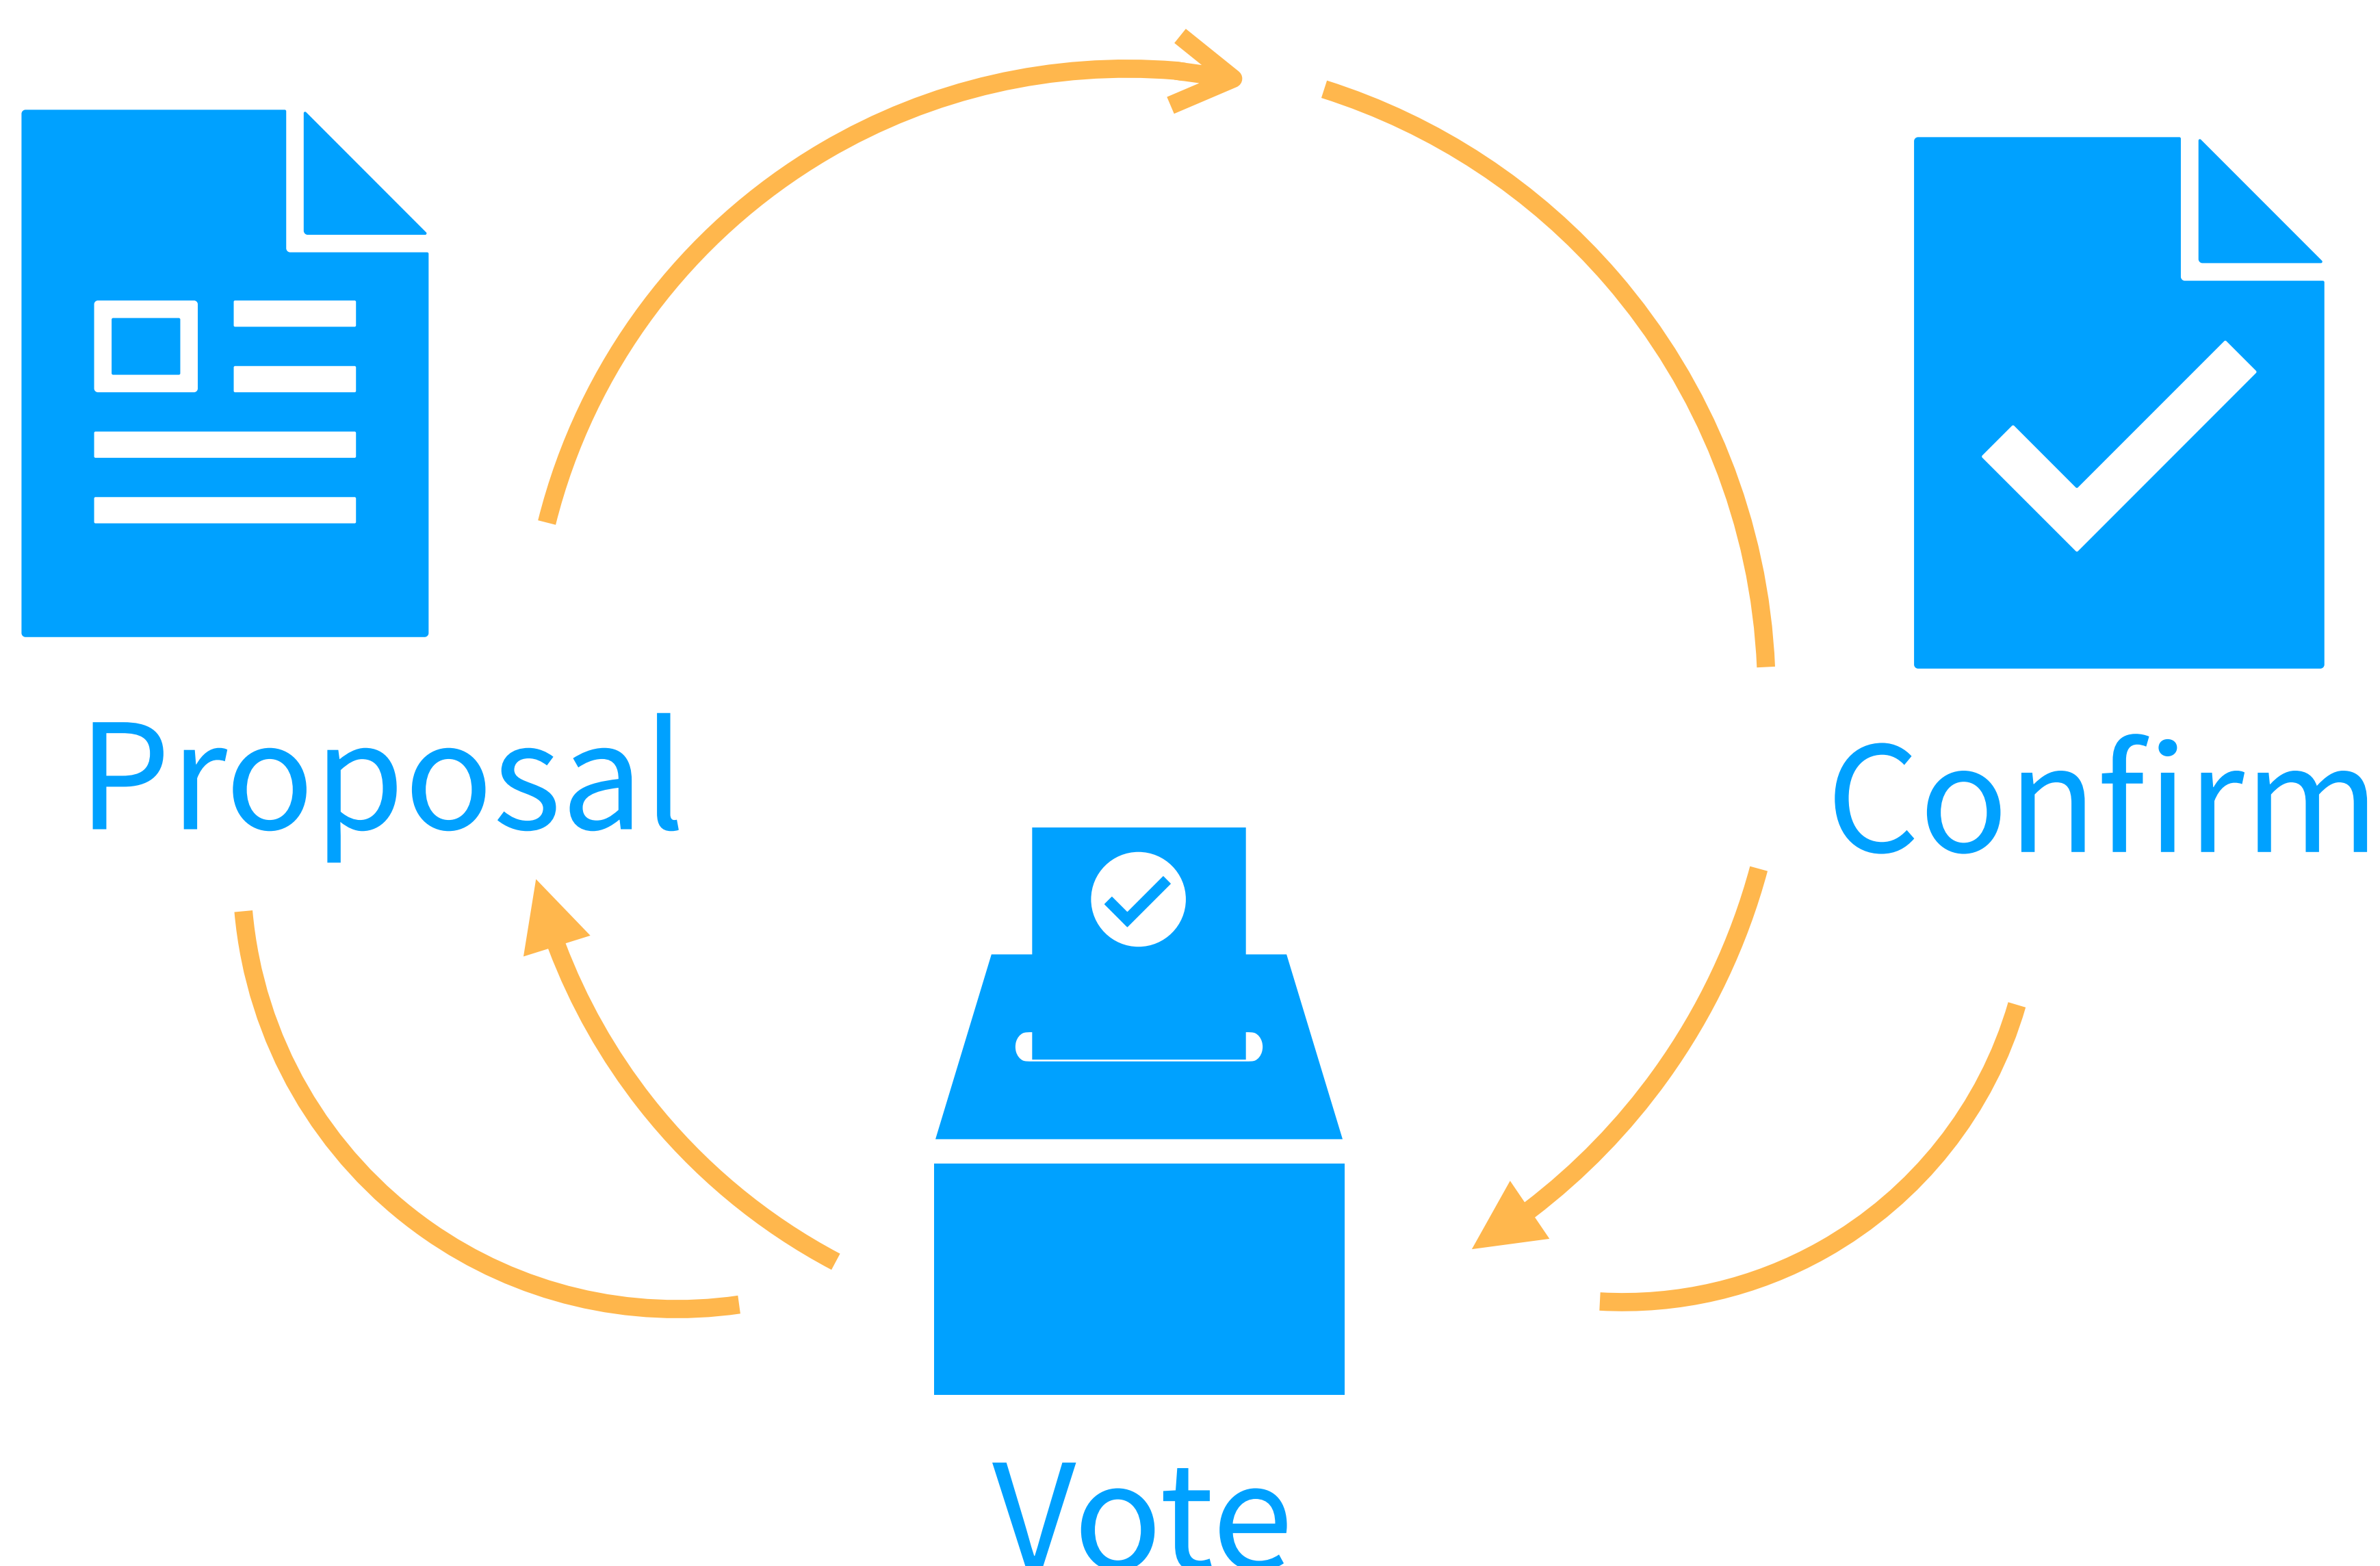

Core Modules: Proposals, Voting, and On-Chain Execution Our governance suite comprises three core modules:

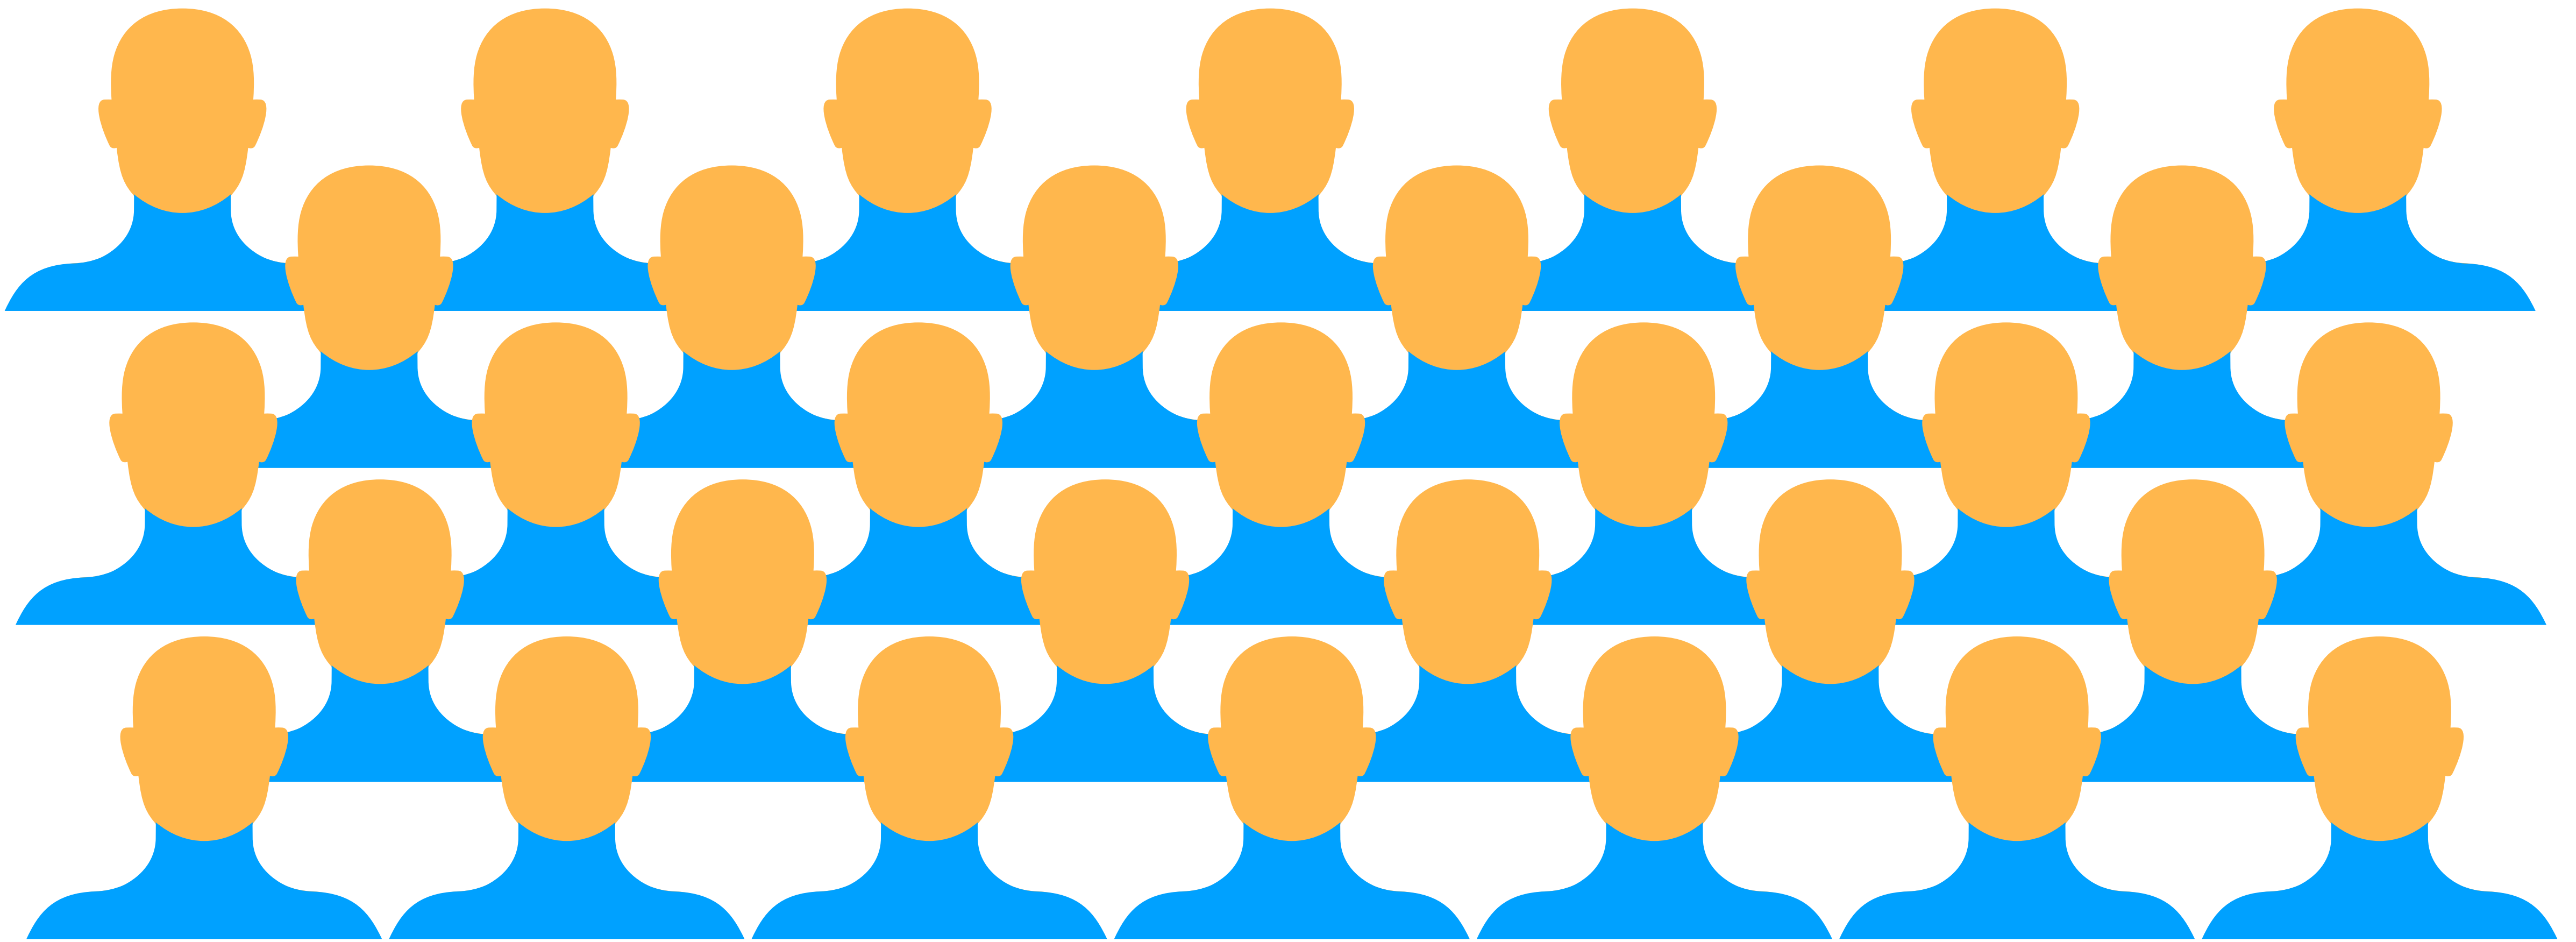

Proposal System: Allows community members (usually holding a certain amount of tokens) to initiate various proposals regarding community development, such as "adjusting transaction taxes," "conducting marketing," and "funding developers."

Voting System: All token holders can vote on proposals based on their holdings. The process is entirely on-chain, open, and transparent.

Execution System: For proposals that pass the vote, if they involve fund usage or contract parameter modifications, they can be automatically executed by community multisignature wallets or time-locked contracts, avoiding centralized risks.

Advanced Features: Weighted Voting, Timelock, and Vault Management To meet the needs of different communities, we also offer a range of advanced features, including but not limited to: **Weighted Voting:** In addition to the standard "1 coin, 1 vote," we also support more complex weighted voting models based on NFT holding and staking time. **Timelock:** Ensures that all approved proposals have a public comment period before implementation, giving community members time to react and review.

Identity Layer: Addressing Pain Points of Community Identity

NFT Blind Boxes: Solving the "Identity Ambiguity" Problem. Identity Layer: NFT Blind Box Market and Trading Market

We believe that a strong community begins with a clear and unified identity.

In the Web3 world, PFPs are not just avatars, but a concentrated embodiment of member identity, cultural belonging, and community identity.

YOKEN provides MEME communities with standardized NFT blind box issuance and trading capabilities, enabling communities to use their own MEME coins to issue identity-related NFTs belonging to their community.

Community Blind Box Issuance: Shaping Your Own Identity System with Your Own MEME Coins

Every MEME community that connects to YOKEN can issue exclusive NFT blind boxes or blind box fragments based on its own culture and narrative.

Community members participate in blind box acquisition by consuming MEME coins, thereby directly converting the token's value into identity assets and cultural symbols.

This mechanism transforms MEME coins from mere trading objects into a passport for entering the community, expressing identity, and participating in culture.

NFT Marketplace: Enabling Real Liquidity for Identity

All community-issued NFT blind boxes and their derivative assets can circulate freely in YOKEN's built-in NFT marketplace. The value of an NFT is not defined by the platform, but rather by community consensus, cultural identity, and market transactions. Identity thus acquires the attributes of being holdable, tradable, and priced. From Holder to Community Member

Through the NFT blind box mechanism, community members are no longer just anonymous wallet addresses, but rather "community members" with clear identities, shared symbols, and a long-term commitment to participation.

Trust Layer: MEME HUB Information Aggregation Zone Addresses Pain Points: Solving the "Lack of Trust" Problem.

In the MEME market, where information is abundant and difficult to verify, a neutral, authoritative, and comprehensive information source is crucial. YOGEN HUB is committed to becoming the most trustworthy "beacon" in this field; we do not judge, we only present.

YOGEN HUB will systematically aggregate comprehensive information about each MEME project, mainly including the following modules:

Official and Basic Information: Providing a one-stop official and authoritative entry point, eliminating the risk of fake links. This module will clearly display the MEME project's official website, official Twitter account, Telegram, and other community links, and provide direct access to core documents such as white papers and token economics.

On-Chain and Security Data: Aggregating the most critical on-chain metrics to achieve complete data transparency. This includes: real-time on-chain price, liquidity pool size and lock-up status, token holding address analysis, whale activity monitoring, and trading volume changes. Simultaneously, we will integrate contract security information, such as whether the contract is open source, whether risky functions exist (e.g., proxy contracts, issuance switches, etc.), and link to third-party audit reports.

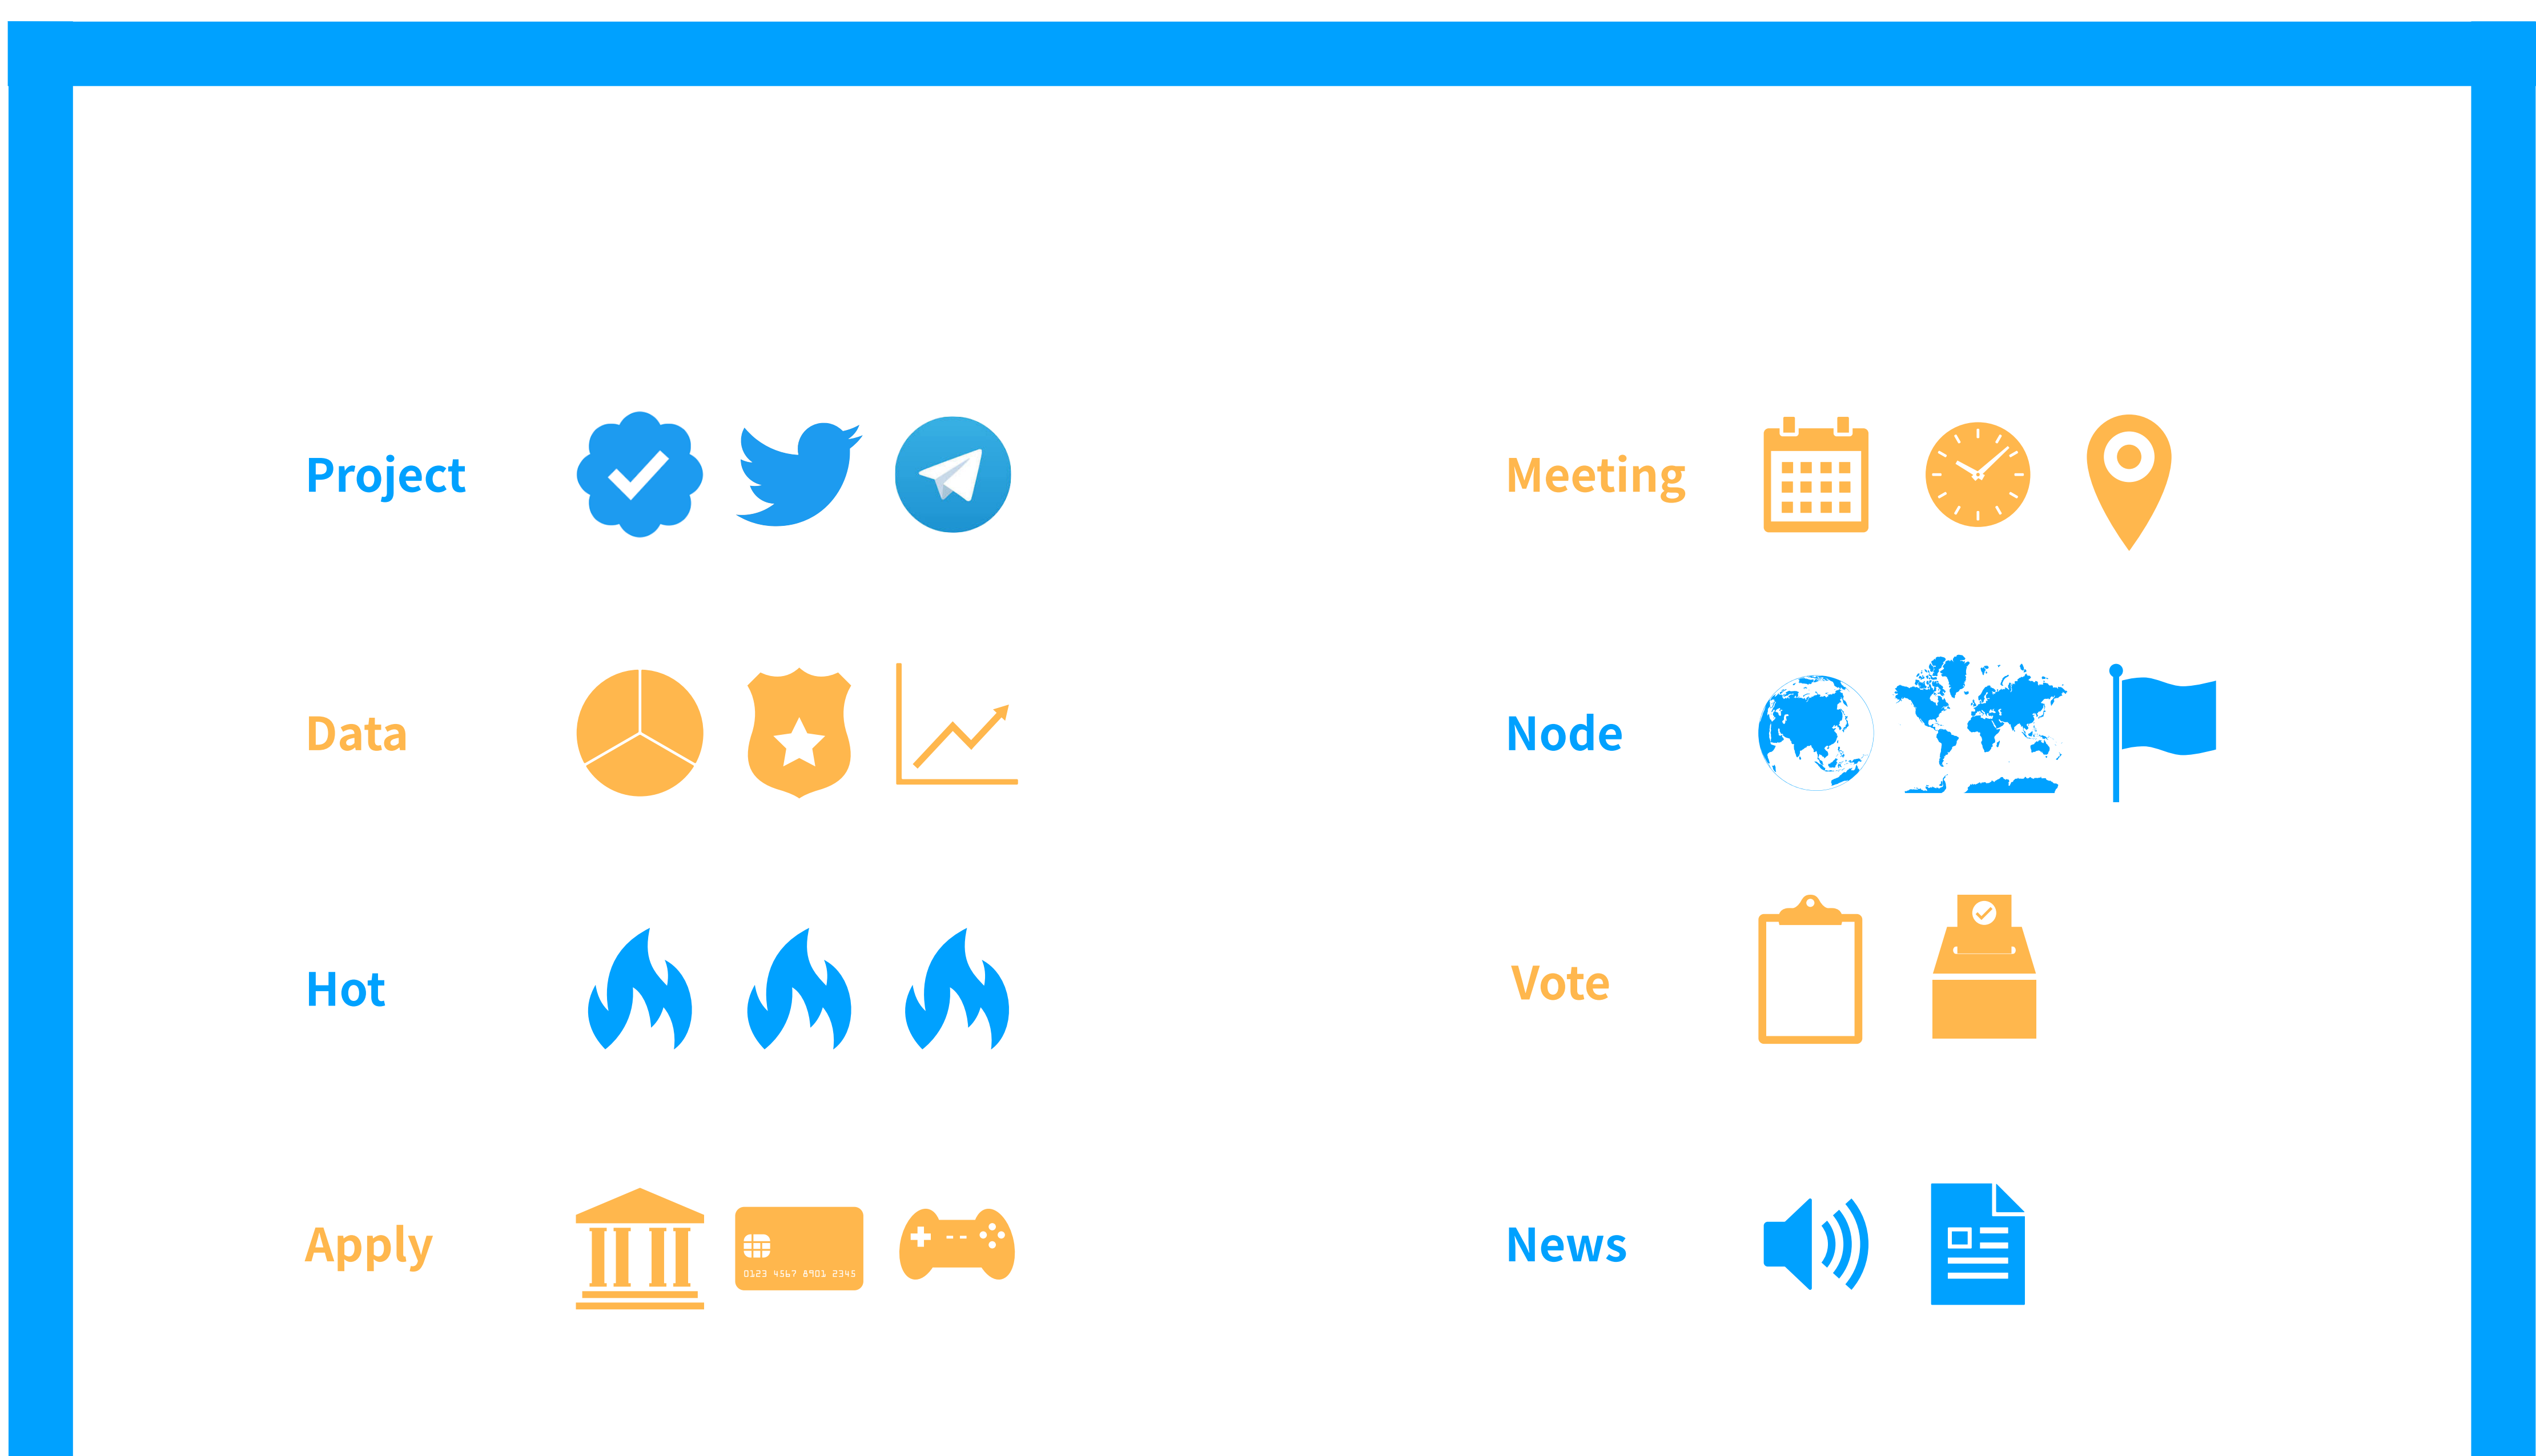

Community and Popularity Metrics: Quantifying and showcasing the project's community activity and global influence. This module will track social media discussion volume, fan growth trends, sentiment analysis, and other popularity metrics. We will also clearly indicate the global community distribution of the project (e.g., Japanese community, Shenzhen community, Turkish community, North American community, etc.), allowing users to understand its internationalization level.

Ecosystem and Practical Applications: Tracking and listing the actual application scenarios of the MEME coin, which is key to measuring its intrinsic value. For example, whether it has been accepted as a payment token by certain GameFi, SocialFi projects, or NFT markets, and which other projects it has officially partnered with.

Community Governance Dynamics: Directly linking to YOGEN's governance module, displaying the community's latest governance proposals, voting processes, and historical results in real time. This intuitively reflects the community's degree of decentralization, decision-making efficiency, and member participation enthusiasm.

Global Event Calendar: This calendar summarizes and announces all in-person meetings (Meetups) and online events (AMAs) worldwide. Each event is clearly marked with its time, location, agenda, and participation details, fostering online and offline interaction within the community.

Latest Updates and Announcements: This calendar provides real-time updates on all the latest developments released by the project through official channels, ensuring community members don't miss any important information, such as version updates, collaboration announcements, or roadmap progress.

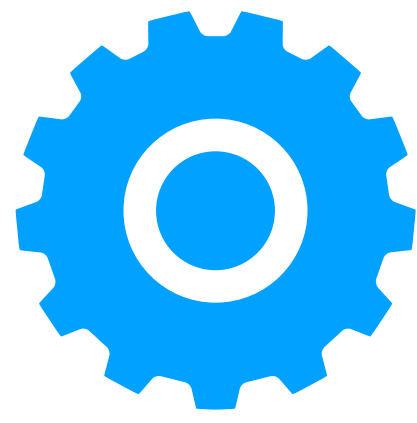

Economic

The YOGEN token is at the heart of the YOGEN ecosystem. It is not only a medium of exchange for value, but also a key tool driving the entire platform's operation, coordinating the interests of all parties, and capturing the value of ecosystem growth. Our design aims to ensure that the value of YOGEN is closely and positively tied to the success of the YOGEN platform.

YOGEN token core uses

govern

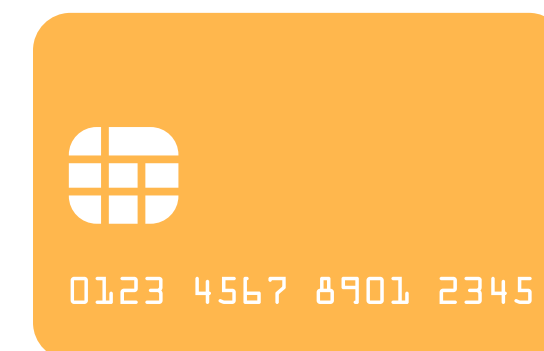

Users holding YOGEN tokens will have voting rights on major developments of the YOGEN platform. This includes, but is not limited to: adjustments to platform transaction fees, the introduction of new functional modules (such as new value layer tools), and decisions regarding the allocation of the ecosystem fund (Grant).

This ensures that the development direction of the YOGEN platform will always remain aligned with the core value contributors.

Pledge

We encourage long-term value investors to grow alongside the platform. Users can stake YOGEN tokens to share a portion of the YOGEN platform's core revenue. This revenue comes from prediction market fees, NFT market sales, and more. This creates direct and sustainable passive income for YOGEN holders, transforming them from mere holders into "shareholders" of the platform.

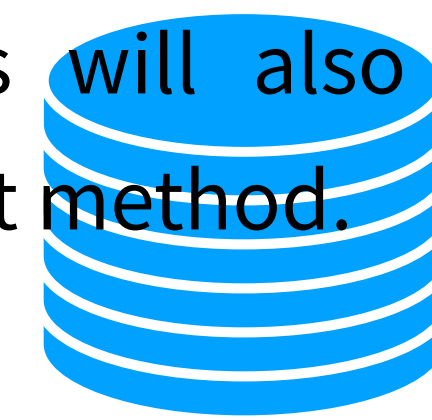

Payment

YOGEN is the primary payment and settlement currency on the platform. For example: In the NFT blind box market, YOGEN can be used to open blind boxes and as a trading instrument in the NFT market.

In MEME HUB, project teams may need to stake or pay YOGEN to apply for premium display slots or official certification.

Future new features will also prioritize the use of \$YOGEN as a payment method.

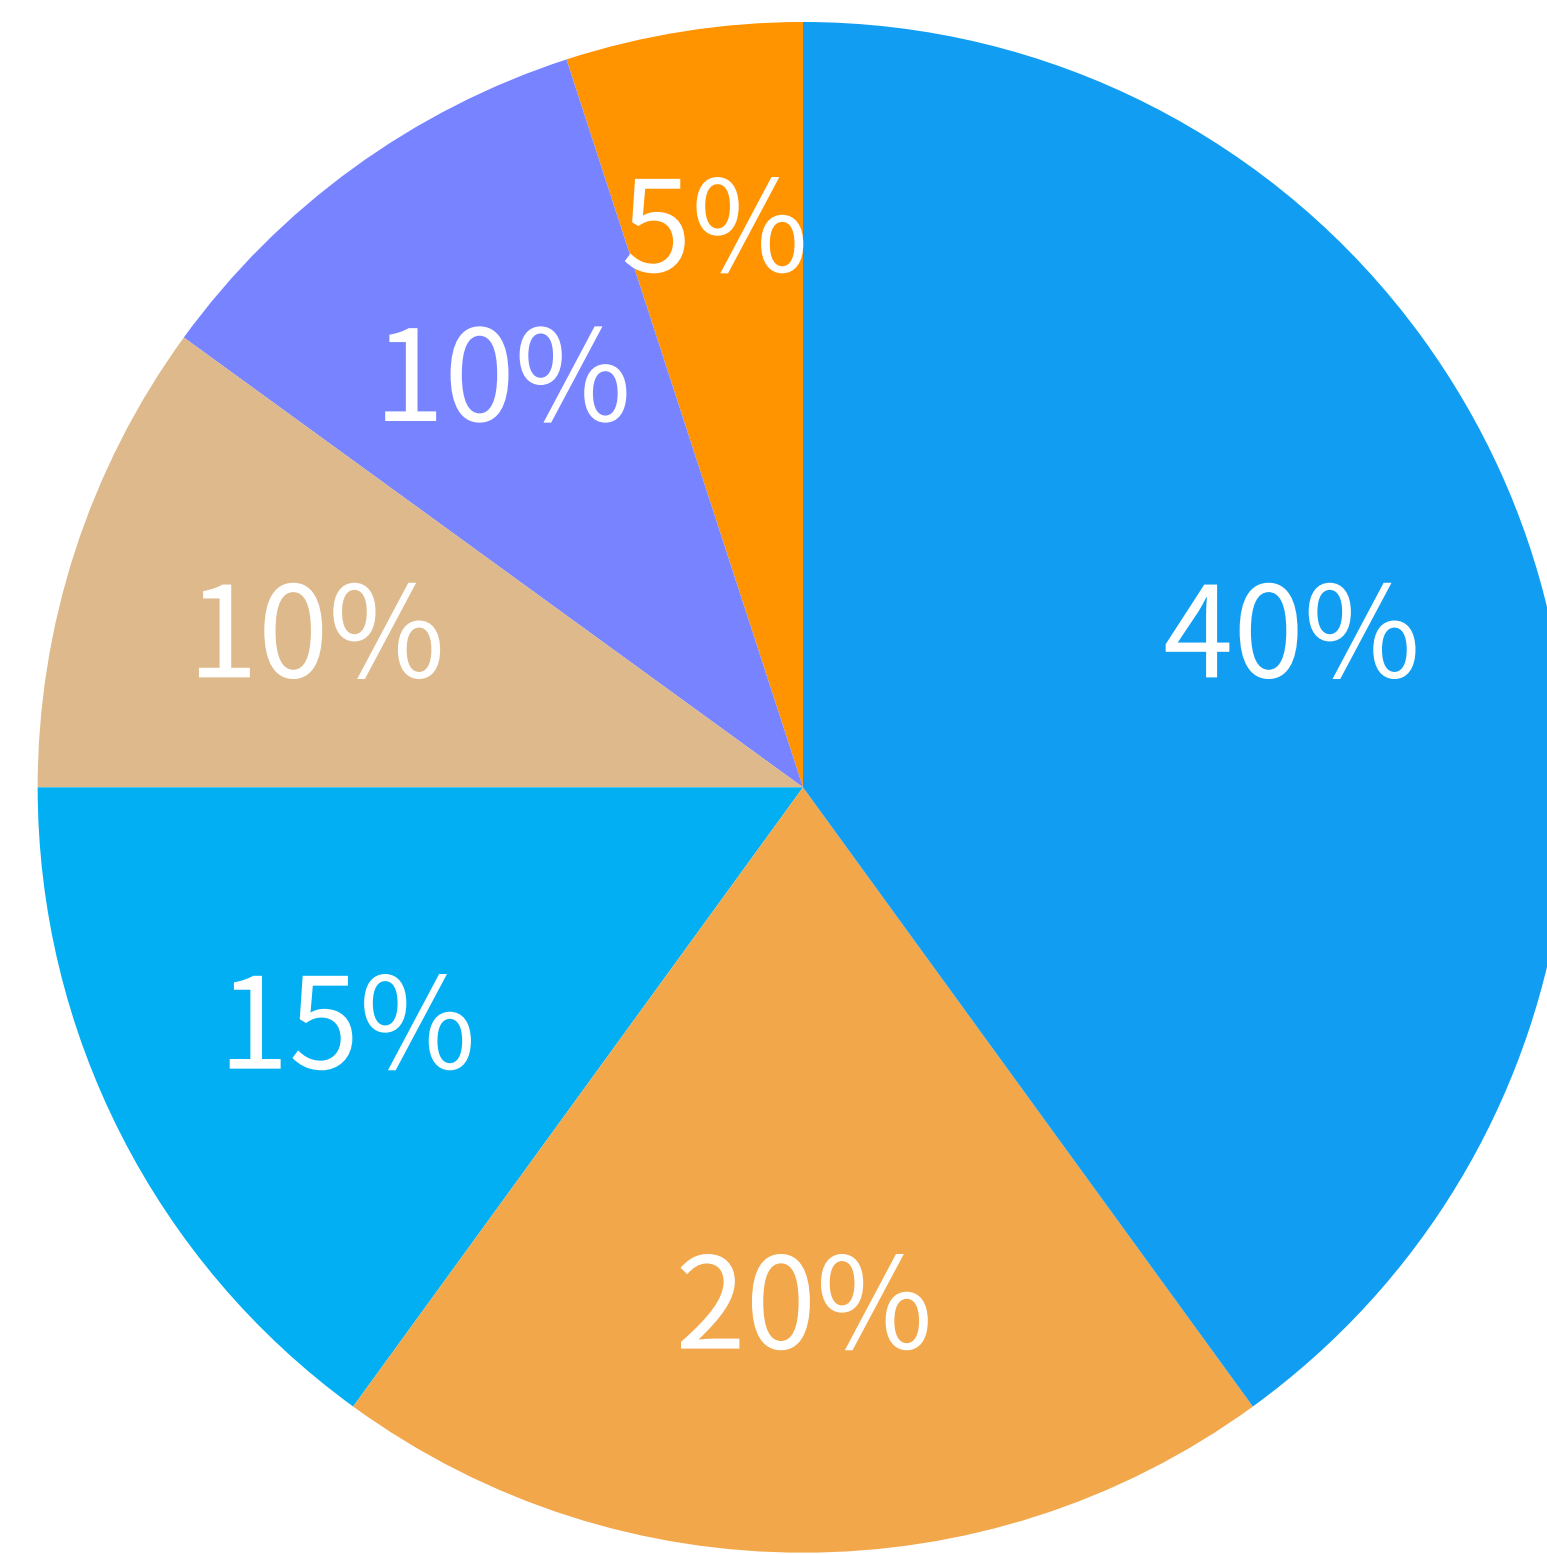

Stimulate

YOGEN代币将作为激励工具，用于引导和奖励对生态有益的行为，包括：

生态引导： 对早期入驻并深度使用YOGEN平台的优质MEME社区进行空投奖励。

用户激励： 对在平台内保持高度活跃的用户进行空投或活动奖励。

流动性激励： 在去中心化交易所（DEX）上为YOGEN的相关交易对提供流动性的用户，将获得YOGEN代币奖励。

Token Allocation and Vesting Schedule

A fair, transparent, and long-term-oriented token allocation scheme is crucial for the healthy development of the project.

Total Supply: 1,000,000,000 YOGEN

TGE: 40%

Core Purpose: TGE is divided into Pre-TGE, TGE, and Co-TGE, distributed to the public in a fair and open manner to achieve a broad distribution of initial holders and raise early development funds and initial liquidity for the project.

Team: 20%

Core Purpose: To incentivize and retain the core development, operations, and strategy teams, ensuring their deep commitment to the project's long-term success.

Vesting Rules: Locked for 3 months, then linearly released over 36 months (3-year vesting).

Ecosystem Development Fund: 15%

Core Purpose: Specifically used to incentivize leading MEME projects to join, fund third-party developer innovation (Grant), and support strategic partnerships with key partners.

Vesting Rules: Related to specific timelines, used to support the continuous and long-term development of the ecosystem.

Community Incentives & Airdrops: 10%

Core Purpose: For the project's cold start and community development. This includes retroactive airdrops to early users and ongoing rewards for users and groups who make outstanding contributions to YOGEN in the future (such as content creation, community governance, and vulnerability discovery).

Unlocking Rules: Gradually released over the next few years based on community activity and contributions.

Market Liquidity & Exchange Reserves: 10%

Core Purpose: To ensure healthy secondary market liquidity for YOGEN tokens. A portion will be used to provide initial liquidity on DEXs, and the remainder will serve as strategic reserves to cover potential costs and market-making support for future listings on mainstream CEXs (Centralized Exchanges).

Foundation: 5%

Core Purpose: As a long-term strategic reserve for the project, supporting its long-term operation (such as server, legal, and security audit costs) and mitigating future uncertainties. The use of these funds will be determined by a vote within the YOGEN DAO.

Suggested Unlocking Rules: Locked for 6 months, then gradually released based on the DAO's governance decisions.

Roadmap

- **2025年Q1**
 - Market Research: In-depth analysis of the current MEME market situation and user needs.
 - Competitive Analysis: Comprehensive analysis of the advantages and disadvantages of existing solutions.
 - Target Audience Profiling: Precisely define the core user group.
- **2025年Q1**
 - Brand and Website Development: Complete the design and development of the official website.
 - Oracle: Develop, test, and launch the oracle product.
- **2025年Q2**
 - First Project Onboarding: Invite the first selected MEME project to join the platform.
 - Economic Model Design: Complete the detailed economic model and distribution plan for the YOGEN token.
 - Initial White Paper: Complete the writing of the YOGEN white paper.
- **2025年Q4**
 - Token Contract Development: Complete the development and multiple audits of the YOGEN token smart contract.
 - New YOGEN Development: Complete the development of the new YOGEN prediction market.
- **2026年Q1**
 - TGE: Complete the YOGEN TGE.
 - DEX Launch: List the YOGEN token on the Pancake exchange.
 - Voting Launch: Launch the voting function of the decentralized governance suite.
 - Expanding Project Onboarding: The goal is to attract more than 50+ MEME projects to join. CEX Launch Plan Initiated: Actively communicate with mainstream centralized exchanges and achieve initial listing.
 - NFT Blind Box Market: Complete the development and deployment of the NFT blind box market.
- **2026年Q2**
 - Deepening Exchange Cooperation: Establish strategic partnerships with the world's Top 10 CEXs.
 - MEME HUB Development and Launch: Complete the development and deployment of the information aggregation zone.
- **2026年Q3**
 - Multi-Chain Deployment: Extend YOGEN's core functions to blockchains such as Solana and BASE.
 - Open Platform: Release SDK and API, encouraging third-party developers to integrate.

Ends

The Future of YOGEN

We begin with a simple yet profound observation: MEME coin, a species driven purely by cultural consensus, stands at a critical crossroads. On one side lies its unparalleled community cohesion and viral cultural energy; on the other, the fleeting nature of its value and the fragility of its ecosystem. This is both the greatest allure and the greatest constraint of the MEME track.

YOGEN was born precisely to address this contemporary issue. What we are doing is not creating another fleeting meme, but providing all meme creators and believers with an infrastructure capable of transforming fleeting euphoria into enduring value. From the value injection of the prediction market to the empowerment of the governance suite, to the identity shaping of the NFT generator and the trust building of MEME HUB, every layer of YOGEN's design is geared towards a common goal: unlocking the true potential of cultural capital.

The future of YOGEN is more than just a successful decentralized application (DApp) or a thriving token. We are committed to building a permissionless, composable cultural economic layer.

In this future, any creative meme, any cohesive community, can easily imbue its "cultural capital" with "financial attributes" through YOGEN's tools. They will no longer be merely speculative symbols, but miniature digital economies possessing real utility, community ownership, and sustainable growth momentum. Ultimately, YOGEN will become the underlying protocol for the intersection of culture and finance in the Web3 world, a "translator" and "amplifier" of value.

This white paper does not depict a closed blueprint, but rather an open invitation.

Whether you are:

a MEME project creator seeking a long-term development path;

a core community member yearning for true governance;

a developer hoping to innovate at the forefront of cultural finance;

a value investor seeking the next great narrative

YOGEN welcomes you.

The wave of change has begun. Now, it's time to join together and truly unleash the potential of memes.

Welcome to YOGEN.
